

Introduction to Computer

Charles Babbage was a Professor of Mathematics at Cambridge University. It was his dream to make a machine; which would have an input device, a processing device, an output device and a storage device. Later, this idea was transformed into the development of modern computer. For this reason, he is known as 'Father of Computer'. The word 'Computer' originated from the word 'Compute' which means to calculate in English.

Charles Babbage

Computer is a machine which performs calculations like addition, subtraction, multiplication, etc. It operates on electricity.

Early Calculating Machines

Calculation was a need from the early days. Some of the early calculating machines are as follows:

Abacus: Abacus was the first calculating machine invented to count numbers. It was invented in the 16th century in China. Simple calculations, like **addition** or **subtraction**, could be performed using the Abacus.

Abacus

Napier's Bones: In 1616, Sir John Napier made a calculating device, called **Napier's Bones**, for **addition**, **subtraction**, **multiplication** and **division** of numbers.
