

## Chapter 08: Planned Change

---

1. A nurse-manager is applying chaos theory to a proposed change in the structure of care at a clinic. What skills will best facilitate the manager's application of this theory?
- Creating "buy-in" from the stakeholders
  - Finding solutions to resistance to change
  - Changing attitudes more than increasing knowledge
  - Finding underlying order in seemingly random data

ANS: D

Feedback: Chaos theory requires finding underlying order in apparently random data. This particular theory of change does not explicitly focus on creating buy-in, addressing resistance, or changing attitudes, although none of these activities is contrary to the theory.

2. The nurse-manager would be justified in making a change for which reasons? Select all that apply.
- To solve an existing problem
  - To test workers' abilities to adapt
  - To increase staff efficiency
  - To reduce unnecessary workload
  - To improve staff productivity

ANS: A, C, D, E

Feedback: Change should be implemented only for good reasons such as the solution of an existing problem, increasing staff efficiency, eliminating unnecessary workload, and improving productivity. Introducing change for the sole purpose of testing workers' abilities to adapt would be unnecessary, disruptive, and likely unethical.
