Heyder, 2024-12-05 Master's Thesis from the year 2024 in the subject Business economics Information Management grade 1
0 Otto Beisheim School of Management Vallendar Chair of Strategy and Marketing course Price Management language
English abstract This thesis explores the transformative role of Artificial Intelligence AI in price management focusing on its
impact across the four key phases strategy analysis decision making and implementation as defined by Simon and Fassnacht
The motivation for this research arises from a gap in existing literature no conceptual framework currently addresses AI's
specific impacts on each phase of the price management process The primary aim is to assess AI's influence including
opportunities risks and structural changes within each phase Two research questions guide this study What phase specific
value propositions and risk factors will AI introduce in each of the four price management phases How can these impacts be
synthesized into a comprehensive decision making framework To address these questions a narrative literature review of
recent studies 2022 2024 was conducted culminating in a structured framework This framework provides a cross industry
overview of AI applications in pricing equipping organizations with a practical tool to evaluate their pricing strategies and
make informed decisions about AI integration The framework presents a varied value risk profile across phases helping
organizations identify where AI can best support pricing and where risks such as algorithmic bias and transparency issues
require oversight A phased approach to AI adoption is recommended beginning with phases where AI supports human
judgment to limit risk Higher levels of automation and decision authority can be introduced later to maximize efficiency and
value provided there is a balanced approach to risk technological maturity and alignment with organizational goals AI
