Analysis Programs Linda Lawrie, William Klock, Donald J. Leverenz, 1984 The evaluation was performed by comparing
building simulations provided by micro programs to those provided by the Building Loads Analysis and System
Thermodynamics BLAST program The two micro programs chosen for evaluation OPCOST and SASEAP are representative of
the type of bin method calculations used in simplified energy analysis procedures The evaluation was based on four factors 1
the ability of the programs to calculate overall annual building energy consumption 2 their ability to study design options for
developing energy efficient new construction 3 their ability to calculate energy savings from various building retrofit options
and 4 the amount of input information required which would be considered judgemental in nature as opposed to building
description oriented The results of the evaluation showed that the microcomputer energy analysis programs could reasonably
predict the proper ranking of design alternatives or retrofit options However the programs could not accurately predict total
annual energy consumption Thus the micro programs should not be used to determine compliance with energy budgets
Likewise the micro programs could not predict the actual energy savings due to a design alternative or a retrofit option The
results did not clearly illustrate which design options were modeled accurately *Handbook of HVAC Design* Nils R.
Grimm, Robert C. Rosaler, 1990 Formerly titled Handbook of HVAC Design the new edition of this well known reference offers
HVAC engineers designers and technicians full coverage of all important aspects of the design operation and maintenance of

heating ventilating and air conditioning HVAC systems Two thirds of the handbook has been revised and rewritten and it now features contributions from experts at top companies such as York Rockwell Honeywell and Sverdrup The book will enable users to produce very efficient and economical systems select and install today s most advanced equipment maintain high system performance comply with key codes and standards and understand the environmental impact of HVAC design
