Hello! Let's learn a little about how translation works by completing this little exercise on decoding DNA. I hope you enjoy it! You will probably notice that some letters have more than one triplet code, this also happens in real DNA because DNA is sometimes what scientists call "redundant."

Hint:

1. Look for the "start" sequence so you know when to start. Nothing before the start sequence is included in our finished product.
2. Circle all the TCG triplets you can find because there are usually spaces between words.
3. Draw a line through all the TCG triplets you can find because there are usually periods.
4. Sometimes there may be mistakes in the code, sometimes you may make a mistake so, your results may not be perfect, but as long as you can tell what the meaning is, you have been successful!
