

DEDUCTIVE REASONING

Deductive reasoning is a logical process that involves drawing specific conclusions based on general principles or premises.

OVERVIEW

Deductive reasoning is a top-down approach to logical thinking where specific conclusions are derived from general principles or premises. It follows a structured format in which if the premises are true and the reasoning is valid, the conclusion must also be true. This type of reasoning is commonly used in mathematics, formal logic, and philosophical thinking.

EXAMPLE

Premise 1: All mammals have lungs.
Premise 2: Dolphins are mammals.
Conclusion: Dolphins have lungs.

In this example, the first premise establishes a general principle that all mammals have lungs. The second premise identifies dolphins as a specific mammal. Using deductive reasoning, we can logically conclude that dolphins must also have lungs.

Mathematical Cognition Wolfgang Grodd, Philippe Chassy, 2016-08-09 Despite the importance of mathematics in our educational systems little is known about how abstract mathematical thinking emerges Under the uniting thread of mathematical development we hope to connect researchers from various backgrounds to provide an integrated view of abstract mathematical cognition Much progress has been made in the last 20 years on how numeracy is acquired Experimental psychology has brought to light the fact that numerical cognition stems from spatial cognition The findings from neuroimaging and single cell recording experiments converge to show that numerical representations take place in the intraparietal sulcus Further research has demonstrated that supplementary neural networks might be recruited to carry out subtasks for example the retrieval of arithmetic facts is done by the angular gyrus Now that the neural networks in charge of basic mathematical cognition are identified we can move onto the stage where we seek to understand how these basic skills are used to support the acquisition and use of abstract mathematical concepts Classroom-Ready Rich Algebra Tasks, Grades 6-12 Barbara J. Dougherty, Linda C. Venenciano, 2023-03-15 Stop algebra from being a mathematical gatekeeper With rich math tasks all students can succeed Every teacher strives to make instruction effective and interesting yet traditional methods of teaching algebra are not working for many students That s a problem But the answer isn t to supplement the curriculum with random tasks Classroom Ready Rich Math Tasks for Grades 6 12 equips you with a cohesive solution 50 mathematical tasks that are rich research based standards aligned and classroom tested The tasks Are organized into learning progressions that help all students make the leap from arithmetic to algebra Offer students interesting mathematics problems to think about and solve so math is investigative interactive and engaging Provide opportunities for you to connect new content to prior knowledge or focus on an underdeveloped concept Engage students in conceptual understanding procedural practice and problem solving through critical thinking and application Come with downloadable planning tools student resource pages and extension questions Include additional support for students who may be struggling Every learner deserves opportunities to engage in meaningful rigorous mathematics And every teacher can develop mathematical thinking and reasoning abilities in students Part of the bestselling series spanning elementary and middle school Classroom Ready Rich Algebra Tasks Grades 6 12 is a powerful add on to any core mathematics program at your school **Neural Information Processing** Akira Hirose, Seiichi Ozawa, Kenji Doya, Kazushi Ikeda, Minho Lee, Derong Liu, 2016-09-30 The four volume set LNCS 9947 LNCS 9948 LNCS 9949 and LNCS 9950 constitutes the proceedings of the 23rd International Conference on Neural Information Processing ICONIP 2016 held in Kyoto Japan in October 2016 The 296 full papers presented were carefully reviewed and selected from 431 submissions The 4 volumes are organized in topical sections on deep and reinforcement learning big data analysis neural data analysis robotics and control bio inspired energy efficient

Psychology and Mathematics Education Gila Hanna, Laura Macchi, Karin Binder, Laura Martignon, Katharina Loibl, 2023-09-05 Modern Mathematics is constructed rigorously through proofs based on truths which are either axioms or previously proven theorems Thus it is par excellence a model of rational inquiry Links between Cognitive Psychology and Mathematics Education have been particularly strong during the last decades Indeed the Enlightenment view of the rational human mind that reasons makes decisions and solves problems based on logic and probabilities was shaken during the second half of the twentieth century Cognitive psychologists discovered that humans thoughts and actions often deviate from rules imposed by strict normative theories of inference Yet these deviations should not be called errors as Cognitive Psychologists have demonstrated these deviations may be either valid heuristics that succeed in the environments in which humans have evolved or biases that are caused by a lack of adaptation to abstract information formats Humans as the cognitive psychologist and economist Herbert Simon claimed do not usually optimize but rather satisfice even when solving problem This Research Topic aims at demonstrating that these insights have had a decisive impact on Mathematics Education We want to stress that we are concerned with the view of bounded rationality that is different from the one espoused by the heuristics and biases program In Simon s bounded rationality and its direct descendant ecological rationality rationality is understood in terms of cognitive success in the world correspondence rather than in terms of conformity to content free norms of coherence e g transitivity
