## 555B EWS II Immobilizer Interface

### Product Description

The 555B EWS II Immobilizer Interface module is used when installing modern key systems in older vehicles. BMW models equipped with the EWS II immobilizer system. This type of system uses a small coil mounted on the ignition key, called a transponder, to transmit a very specific RF signal. The coil is powered by an antenna (or coil) around the ignition switch, which is fed by the immobilizer system. When the correct signal is received, the immobilizer will enable the ignition and fuel system. If a different signal is received, the vehicle and the immobilizer does not receive a valid key, the system will not start. The 555B bypasses the immobilizer system only while the module is in the ignition and fuel system. This maintains integrity. When the remote start system is not in use, the EWS II system remains fully active.

### Immobilizer Interface Instructions

Before beginning the installation, remove the battery and use the battery safety label to help to isolate permanently to the unit. If a new key is being purchased through the dealer, remove it from the dealer's key to the factory immobilizer.
