East African Rifts:

Rifts and Volcanoes Celia Nyamweru, 1980 *East African Rifts* R. W. Girdler, 2013-10-22 Developments in Geotectonics 7 East African Rifts focuses on the movements structure and behavior of the East African rift system The selection first offers information on the surface structure and plate tectonics of Afar tectonic and magmatic significance of volcanism in the Afar depression and preliminary interpretation of the gravity field of Afar northeast Ethiopia Discussions focus on crustal models of Afar based on gravity and seismic data tectonics volcanism geological setting and crustal extension The text also elaborates on the gravity survey of the central part of the Ethiopian Rift Valley and an aeromagnetic survey of the Afar triangle of Ethiopia The book examines the arrangement and development of continental rift zones East African rift development and the seismicity of the East African rift system Topics include earthquake mechanisms seismicity and the main categories of rift zones The manuscript is a dependable reference for readers interested in the East African rifts

Sedimentation in the African Rifts L. E. Frostick, 1986 **The East African Rift System** Athanas Simon Macheyeki, Dalaly Peter Kafumu, 2024-03-14 The East African Rift System Geodynamics and Natural Resource Potentials provides state of the art knowledge and skills on how to explore model and extract the resources using the East African Rift System EARS as a model Each aspect to be discussed in the East African Rift System shall have its equivalent case study and readers interested in each rift of the world will find something connected or linked to his her rift system of interest be it a sub chapter on earthquakes geothermal energy models etc The East African Rift System Geodynamics and Natural Resource Potentials also describes rifting models of all other known rifts especially continental rifts of the world such as the Basin and Range Province Rio Grande USA Rhine Graben France and Germany the Tibetan Rohai Tibet the Shaanxi Bohai China Lake Baikal Russia North Island Australia and the Aegean Sea Rift Turkey Key aspects to be presented shall be rift type rift age rift physical dimensions geothermal gradient models natural resources and models of exploration Connects the science of rift systems to their economic potentials using the East African Rift System as the prime example Includes discussions and case studies from rift systems around the world Features chapters dedicated to natural resources such as mineral deposit types Au He REE U and the basic principles of their exploration The Afar Volcanic Province Within the East African Rift System G. Yirgu, Cindy J. Ebinger, P. K. H. Maguire, 2006 The seismically and volcanically active East African Rift System is an ideal laboratory for continental break up processes it encompasses all stages of rift development Its northernmost sectors within the Afar volcanic province include failed rifts nascent sea floor spreading and youthful passive continental margins associated with one or more mantle plumes A number of models have been proposed to explain the success and failure of continental rift zones but there remains no consensus on how strain localizes to achieve rupture of initially 125 250 km thick plates or on the interaction between the plates and asthenospheric processes This collection of papers provides new structural stratigraphic geochemical and geophysical data and numerical models needed to resolve fundamental questions

concerning continental break up and mantle plume processes The focus is on how mantle melt intrudes and is distributed through the plate and how this magma intrusion process controls along axis segmentation and facilitates break up **East African Rifts. Girdler**, 1972 *Seismotectonic Studies of the East African Rift System North of 12° S to Southern Red Sea* Fekadu Kebede, 1989 *Continental Rifts: Evolution, Structure, Tectonics* K.H. Olsen, 1995-11-24 This multi author book has been prepared by an international group of geoscientists that have been active in rift research since the late 1960s In 1984 an informal grass roots study group was initiated to compare individual research results and to explore in greater depth the apparent differences and similarities in the interpretations from various rift systems The group became known as the CREST working group an acronym of Continental Rifts Evolution Structure and Tectonics which not surprisingly became the title of this book Continental Rifts Evolution Structure Tectonics presents an overview of the present state of understanding and knowledge of the processes of continental rifting from a multidisciplinary lithospheric scale perspective The chapters have been structured on each rift system in approximately the same synoptic sequence so as to facilitate comparisons of rifts by the reader The book complements its predecessors by presenting a more unified picture It succeeds in presenting the status of a representative majority of the continental rift systems that have been at the forefront of recent research For students and experienced researchers alike this book will be of significant value in assessing the current state of knowledge and in serving as a framework for future research A History of the Earth John J. W. Rogers, 1993-11-18 This book surveys the history of the Earth and the nature of the processes that controlled its history Integrating information from many fields the book focuses on fundamental processes the geological record historical topics and specific areas such as the development of modern ocean basins and the nature of cratonic sedimentary cover sequences Sedimentary Basins Gerhard Einsele, 2000-07-27 This completely revised and enlarged second edition provides an up to date overview of all major topics in sedimentary geology It is unique in its quantitative approach to denudation accumulation systems and basin fillings including dynamic aspects The relationship between tectonism and basin evolution as well as the concepts of sequence cycle and event stratigraphy in various depositional environments are extensively discussed Numerous often composite figures a well structured text brief summaries in boxes and several examples from all continents make the book an invaluable source of information for students researchers and professors in academia as well as for professionals in the oil industry **Continental and Oceanic Rifts** Inter-Union Commission on Geodynamics.
