

Ecology Unit Exam Review Guide ANSWERS

1. How is a niche related to a habitat? How are they different?
A niche describes a living thing's role or job in their habitat and includes everything about the organism like where they live and what it is like there; their habitat is only the physical area where they live.
2. List and explain the different ways we can show how energy cycles in an ecosystem.
Energy pyramid: shows how the energy is passed using a diagram that shows that there is more energy and there are more organisms at the bottom than at the top
Food Chain: a line of who eats whom, energy is passed from one thing to the next
Food web: shows how all the food chains in an area are connected or related
3. What is a biome?
A biome is a region with a specific climate and which supports specific kinds of living things.
4. In which biome do we live?
Temperate deciduous forest
5. What is a major characteristic of that biome? (What happens to the trees?)
Trees lose their leaves in this biome when the seasons change to fall/winter.
6. What is biodiversity? Why is it important?
Biodiversity is the number and kinds of living things in an ecosystem. Biodiversity is important because ecosystems with greater biodiversity are usually healthier and can survive better if something dies out or if conditions change a little. Biodiversity is important for biomes to be stable.
7. Which biome has the most biodiversity? Why is that important for that biome?
Tropical rainforest; it is one of the most stable biomes and can survive changes in conditions.
8. Compare and contrast biotic and abiotic factors. Use a Venn diagram or sentences.
Abiotic: nonliving factors such as sunlight, rain, temperature, rocks, soil, etc.
Biotic: living factors such as different plants, animals, bacteria, fungi, etc.
9. What abiotic factors are key in determining the type of biome that exists in an area?
Rainfall and temperature
10. What types of things can be limiting factors?
Limiting factors are resources an organism needs that are in limited supply. They are things like food, water, space, etc.
11. When do limiting factors have the greatest impact on an ecosystem? Why?
When populations are larger and are at or near the carrying capacity, the limiting factors become more important in keeping the population at a level the ecosystem can sustain.
