Community Garden Guides:

Guide to Community Gardening Vincent Bronson, 2020-12-31 According to Marin Master Gardeners a community garden is any piece of land gardened by a group of people utilizing either individual or shared plots on private or public land. Community gardens provide fresh products and plants as well as contributing to a sense of community and connection to the environment and an opportunity for satisfying labor and neighborhood improvement. They are publicly functioning in terms of ownership, access, and management as well as typically owned in trust by local governments or not-for-profit associations. Community gardens vary widely throughout the world. In North America, community gardens range from familiar victory garden areas where people grow small plots of vegetables to large greening projects to preserve natural areas to tiny street beautification planters on urban street corners. Some grow only flowers; others are nurtured communally and their bounty shared. There are even non-profits in many major cities that offer assistance to low-income families, children groups, and community organizations by helping them develop and grow their own gardens. In the UK and the rest of Europe, closely related allotment gardens can have dozens of plots each measuring hundreds of square meters and rented by the same family for generations. In the developing world, commonly held land for small gardens is a familiar part of the landscape even in urban areas where they may function as market gardens. They also practice crop rotations with versatile plants such as peanuts, tomatoes, and much more. Community gardens are often used in urban neighborhoods to alleviate the food desert effect. Food accessibility described in urban areas refers to residents who have limited access to fresh produce such as fruits and vegetables. Food deserts often serve lower-income neighborhoods usually in which residents are forced to rely on unhealthy food options such as expensive processed foods from convenience stores, gas stations, and fast food restaurants. Community gardens provide accessibility for fresh food to be in closer proximity located in local neighborhoods. Community gardens can help expand the realm for ensuring residents access to healthy and affordable food in a community. Community gardens may help alleviate one effect of climate change which is expected to cause a global decline in agricultural output, making fresh produce increasingly unaffordable. Community gardens are also an increasingly popular method of changing the built environment in order to promote health and wellness in the face of urbanization. The built environment has a wide range of positive and negative effects on the people who work, live, and play in a given area, including a person's chance of developing obesity. Community gardens encourage an urban community's food security, allowing citizens to grow their own food or for others to donate what they have grown. Advocates say locally grown food decreases a community's reliance on fossil fuels for transport of food from large agricultural areas and reduces a society's overall use of fossil fuels to drive in agricultural machinery. A 2012 op-ed by community garden advocate Les Kishler examines how community gardening can reinforce the so-called positive ideas and activities of the Occupy movement. Community gardens improve users' health through increased fresh vegetable consumption and providing a venue for exercise. A fundamental part of good health is a
