

## Electric Charge and Static Electricity

### Understanding Main Ideas

The person whose finger is shown below has walked across a carpet and is about to touch the doorknob. Answer the following questions on a separate sheet of paper.

- Are the charges in the finger attracted or repelled by the charges in the doorknob?  
How can you tell? They are attracted; fingers = negative, doorknob = positive
- What do the lines around the finger and doorknob represent? The electric field
- One of a kind static electricity is a result of electrons moving into an object from another object. What is another way static electricity can build up in an object?

By induction, friction or conduction

### Building Vocabulary

From the list below, choose the term that best completes each sentence.

conservation of charge

static electricity

conduction

induction

static discharge

electric field

friction

electric force

- In electricity, electric force is the attraction or repulsion between electric charges.
- The buildup of charges on an object is called static electricity.
- The law of conservation of charge states that charges are not created or destroyed. They are transferred.
- The transfer of charge from one object to another by rubbing is called friction.
- The loss of static electricity as electric charges transfer from one object to another is called static discharge.
- A(n) electric field is a region around a charged object where the object's electric force is exerted on other charged objects.
- The transfer of electrons from one part of an object to another part, caused by the electric field of another object, without the two objects touching is called induction.
- The transfer of charge when electrons move from a charged object to another object by direct contact is called conduction.
