voltage

*Light bulbs convert electrical energy into light.*

An electric \_\_\_\_\_ is a flow of electricity through a material. Materials that allow electricity to flow through them are called \_\_\_\_\_. An electric \_\_\_\_\_ is a path through which electric currents flow. In order to start the current flowing, a circuit needs a \_\_\_\_\_ source such as a \_\_\_\_\_.

Many circuits have a \_\_\_\_\_, which is a device to open and close the circuit. When the circuit is \_\_\_\_\_, the electric current does not flow. When the circuit is \_\_\_\_\_, current does flow.

Circuits also have \_\_\_\_\_, which are objects that resist the flow of electricity. Resistors can be used to transform electrical energy into other forms of energy such as \_\_\_\_\_ or light. A light bulb is a resistor that transforms electrical energy into light energy.

Without resistors, electricity can travel too quickly through a circuit damaging the parts of the circuit. When this happens it's called a \_\_\_\_\_ circuit. A \_\_\_\_\_ is a safety device that prevents short circuits by breaking the circuit when too much current is traveling through it.
