Rethinking Map Literacy Ming Xie,Steven Reader,H. L. Vacher,2021-03-29 This book provides two conceptual frameworks for further investigation of map literacy and fills in a gap in map literacy studies addressing the distinction between reference maps and thematic maps and the varying uses of quantitative map literacy QML within and between the two The text offers two conceptual frameworks and uses specific map examples to explore this variability in map reading skills and knowledge with the goal of informing educational pedagogy and practices within geography and related disciplines The book will appeal to cartographers and geographers as a new perspective on a tool of communication they have long employed in their disciplines and will also appeal to those involved in the educational pedagogy of information and data literacy as a way to conceptualize the development of curricula and teaching materials in the increasingly important arena of the interplay between quantitative data and map based graphics The first framework discussed is based on a three set Venn model and addresses the content and relationships of three literacies map literacy quantitative literacy and background information As part of this framework the field of QML is introduced conceptualized and defined as the knowledge concepts skills and facts required to accurately read use interpret and understand the quantitative information embedded in geographic backgrounds The second framework is of a compositional triangle based on 1 the ratio of reference to thematic map purpose and 2 the level of generalization and or distortion within maps In combination these two parameters allow for any type of map to be located within the triangle as a prelude to considering the type and level of quantitative literacy that comes into play during map reading Based on the two frameworks mentioned above the pedagogical tool of word problems is applied to map literacy in an innovative way to explore the variability of map reading skills and knowledge based on specific map examples Designing Gamified Systems Sari Gilbert,2015-08-11 Designing Gamified Systems is a fundamental guide for building essential skills in game and interaction design to revitalize and reimagine real world systems from cities and corporations to schools and the military Author Sari Gilbert develops a set of core principles and tools for using game thinking and interactive design to build motivation explain hard concepts broaden audiences deepen commitments and enhance human relationships Designing Gamified Systems includes Topics such as gamified system design behavioral psychology marketing business strategy learning theory and instructional design Interviews with leaders and practitioners in this emerging field who explain how the job of the game designer is being redefined Exercises designed to both encourage big picture thinking about gamified systems and help you experience and understand the challenges and nuances involved in designing them A companion website [www.gamifiedsystems.com](http://www.gamifiedsystems.com) with additional materials to supplement learning and
