East Link Light Rail Transit Project, Seattle ,2011 **Long-term Performance and Life-cycle Costs of Stormwater Best Management Practices** Scott Michael Taylor,2014 Chapter 1 Introduction chapter 2 Literature review and survey findings chapter 3 Hydrologic performance assessment methods and data sources chapter 4 Water quality estimation methods and data sources chapter 5 BMP operation and maintenance requirements chapter 6 Capital and operation and maintenance costs chapter 7 Whole life cycle model chapter 8 Performance of nonstructural BMPs chapter 9 DOT BMP planning tool References **Great Lakes** Velma I. Grover,Gail Krantzberg,2012-10-02 This edited volume while focusing on participatory governance in the Great Lakes basin of North America also gives a comparative perspective of the African Great Lakes The book describes the actions taken at degraded locations along the Great Lakes in North America through Remedial Action Plans RAP and other mechanisms with an aim to highlight the successes and failures encountered in ecosystembased regenerative approaches The book documents these experiences including the lead taken by industry in improving environmental quality of the Great Lakes The book concludes with lessons learnt about revitalizing the ecosystem integrity of the lakes which can be replicated in other watersheds of the world **Site Engineering for Landscape Architects** Steven Strom,Kurt Nathan,Jake Woland,2013-01-30 The Leading Guide To Site Design And Engineering Revised And Updated Site Engineering for Landscape Architects is the top choice for site engineering planning and construction courses as well as for practitioners in the field with easy to understand coverage of the principles and techniques of basic site engineering for grading drainage earthwork and road alignment The Sixth Edition has been revised to address the latest developments in landscape architecture while retaining an accessible approach to complex concepts The book offers an introduction to landform and the language of its design and explores the site engineering concepts essential to practicing landscape architecture today from interpreting landform and contour lines to designing horizontal and vertical road alignments to construction sequencing to designing and sizing storm water management systems Integrating design with construction and implementation processes the authors enable readers to gain a progressive understanding of the material This edition contains completely revised information on storm water management and green infrastructure as well as many new and updated case studies It also includes updated coverage of storm water management systems design runoff calculations and natural resource conservation Graphics throughout the book have been revised to bring a consistent clean approach to the illustrations Perfect for use as a study guide for the most difficult section of the Landscape Architect Registration Exam LARE or as a handy professional reference Site Engineering for Landscape Architects Sixth Edition gives readers a strong foundation in site development that is environmentally sensitive and intellectually stimulating **Design of Urban Stormwater Controls, MOP 23** Water Environment Federation,American Society of Civil Engineers/ Enviornmental & Water Resources Insitute,2012-05-07 Innovative Techniques for Designing Urban Stormwater Controls Fully updated to

address the paradigm shift in the way stormwater is viewed and managed Design of Urban Stormwater Controls focuses on consolidating technologies to foster a convergence between traditional stormwater controls and green infrastructure This authoritative resource explains how systems of stormwater controls can be designed to meet multidisciplinary objectives including flood control stream channel protection groundwater recharge water quality improvement protection of public safety health and welfare and multipurpose public benefits Coverage includes Urban stormwater management overview Effects of stormwater on receiving waters Performance goals for stormwater controls Unit processes and operations for stormwater control Selection criteria and design considerations Swales and strips Basins Filters and infiltrators Gross pollutant traps and mechanical operations Maintenance of stormwater controls Whole life cost of stormwater controls Performance assessment Analytical tools for simulation of stormwater controls *Pollutant Load Reductions for Total Maximum Daily Loads for Highways* Shahid A. Abbasi,Antti Koskelo,2013 The intent of this synthesis is to collect information on the types of best management practices BMPs currently being used by state departments of transportation DOTs for meeting total maximum daily load TMDL water quality goals for stormwater runoff The study approach includes two major components interviews with 12 state DOTs to identify the existing state of the practice as it relates to TMDL implementation and a review of selected literature sources based on the criteria of highways TMDLs BMP performance and BMP cost to stay consistent with the goals of this synthesis In particular detailed quantitative BMP performance and cost data including life cycle costs are presented which builds significantly on previous studies of this nature The impetus for this study was to help fill in a significant information gap on what types of BMPs are cost effective for specific use in linear highway applications for TMDL implementation purposes Even with the advent of new low impact development green infrastructure practices there remain a lack of effective BMP technologies and nonstructural controls e g source control and water quality credit trading for DOTs to implement for National Pollutant Discharge Elimination System permit compliance This problem will only grow larger as new TMDLs are continually being developed and many DOTs are unprepared both technically and economically to cope with the additional requirements some states already have 60 TMDLs in which they are a named stakeholder In an effort to help state DOTs with TMDL implementation a simple user friendly BMP matrix toolbox with quantitative performance and where available life cycle cost data for various structural and nonstructural BMPs is presented Some of the more common TMDL pollutants of concern sediment nutrients fecal coliform and metals are focused to maximize applicability for state DOTs The performance and cost data were derived from numerous literature sources including the International Stormwater BMP Database which currently consists of more than 400 studies This study is designed to help promote information exchange and technology transfer among DOTs for the mutual benefit of all highway managers faced with TMDL implementation Conclusions from this synthesis are briefly highlighted here by general topic area with more details provided in chapters four and five Performance for structural BMPs varied by pollutant and BMP type however certain trends did

emerge from the literature review. In general, total suspended solids (TSS) appear to be relatively easy to treat with a broad range of BMPs including infiltration basins, sand filters, and bioretention. Nutrients, especially total nitrogen, can be more challenging to remove; nonetheless, some BMPs, e.g., Austin sand filters for total nitrogen and infiltration basins for total phosphorus, showed some promise. Fecal coliform data were limited; however, several BMPs were documented as being effective, including infiltration basins and infiltration trenches, among others. Additional BMP performance data from the International Stormwater BMP Database support the view that media filters and retention ponds are consistently effective for a wide variety of TMDL pollutants, including TSS, nutrients, fecal coliform, and total metals. This conclusion is based on statistics that show that median concentrations of these pollutants were statistically lower in effluent concentrations compared with influent concentrations based on a large number of studies from around the country, although not all highway-related. Overall, while these BMPs may be generally effective across a range of environmental conditions, obtaining local site-specific BMP monitoring data would be preferable for developing individual state DOT TMDL programs. Performance data are also presented for nonstructural practices such as street sweeping, catch basin cleaning, and tree planting. Quantitative performance data are generally lacking in the literature for these types of BMPs. The limited information found suggests that street sweeping and catch basin cleaning may potentially be effective strategies for reducing TSS, nutrients, and metals, provided they are performed frequently enough and the right technology is used. In the case of sweeping, tree planting, and stream restoration were documented as having some water quality benefits for nutrients. Notably, anti-icing management has been successfully demonstrated in New Hampshire, where a 20% reduction in chlorides was achieved by upgrading the technology on snow plows in response to a chloride TMDL. In addition to performance, life cycle cost data are presented where available. However, the cost information could not be adequately synthesized owing to differences in cost estimating approaches, reporting units, variability in costs among states and regions, and inconsistencies in BMP naming conventions. This also prevented a true cost-benefit analysis. However, numerous sources of life cycle cost data, as well as sources for individual cost elements such as design, construction, and operation and maintenance, are provided where the interested reader may obtain more detailed information. Given the differences in cost from one region to another, the reader is encouraged to obtain cost data that are most relevant to their state. Hyperlinks are provided in the BMP matrix toolbox where one may access examples of reports with detailed life cycle cost data, and numerous additional cost sources are cited throughout the section on Highway Best Management Practices in chapter three. There appear to be several common elements to developing an effective TMDL implementation program, all of which have the potential to benefit DOTs by helping them receive a more equitable waste load allocation and developing a more manageable TMDL program. The key elements are listed here, although not all may apply to every DOT. Increase awareness and training within the DOT on TMDL issues, especially in cases where the DOT is named a stakeholder in only a few TMDLs or none. Develop off-site watershed partnerships and collaborate with

other stakeholders to ensure cost effective approaches based on economies of scale and to promote information sharing and technology transfer among stakeholders Collaborate with the state regulatory agency during the TMDL development process especially early in the process Estimate pollutant loads generated within the DOT right of way either through water quality monitoring or modeling and predict potential load reductions from various BMP implementation scenarios Although some DOTs had relatively successful TMDL programs others clearly faced a number of challenges The primary challenges were limited financial resources a lack of effective BMP technologies for linear highway applications and difficulties in navigating complex regulatory environments where TMDL related requirements were either inconsistently enforced or restricted the flexibility of the DOT in implementing BMPs of their choice Further research is suggested on the following topics long term adverse environmental and cultural aspects of BMP implementation new and innovative BMP technologies suitable for the highway environment more studies on BMP longevity life cycle costs and maintenance costs and standards and alternative and creative solutions to addressing emerging TMDLs for less traditional pollutants such as biological integrity sediment toxicity and organic compounds e g vehicle source control water quality trading Pages 1 2

reducing energy consumption for both heating and cooling and in reducing the effects of urban heat islands In addition green roofs can contribute public green spaces to cities This guide is not intended as a comprehensive bibliography but highlights selected works and resources about green roofs Many of these works are available in the Science reference collection in the Science and Business Reading Room which is located on the fifth floor of the Adams Building at the Library of Congress
