Engineering Geology where geological properties important from civil engineering point of view are studied. Building Material and Concrete Technology lab where testing of material is done. Fluid Mechanics lab which is designed to examine the types and various parameters of fluid flow. Applied Hydraulics lab where students study on the models of hydraulic machinery. Surveying lab where students get to know about field surveying like chain and compass survey, Theodolite Survey and Total Station Survey. Transportation lab where bitumen and testing of aggregates used for road work construction is done. Geotechnical lab where properties and the strength parameters of the soil are studied. Environmental lab where the quality of water and waste water is checked. Various tests on solid waste samples are done and noise levels at various places are checked. Each experiment starts with objectives to be achieved, the experimental set up and the materials that are needed to perform the experiment and a stepwise procedure for conducting the experiment and a set of MCQs at the end. The students will note down their observations, measurements and/or calculations on the Results Sheets provided at the end of the experiment. *Laboratory Manual : Engineering Earth Sciences, Geology 290. 292* David Milne Cruden, 1996

Environment for a Sustainable Future David C. Gosselin, Anne E. Egger, J. John Taber, 2018-12-13. Interdisciplinary Teaching about the Earth and Environment for a Sustainable Future presents the outcomes of the InTeGrate project, a community effort funded by the National Science Foundation to improve Earth literacy and build a workforce prepared to tackle environmental and resource issues. The InTeGrate community is built around the shared goal of supporting interdisciplinary learning about Earth across the undergraduate curriculum, focusing on the grand challenges facing society and the important role that the geosciences play in addressing these grand challenges. The chapters in this book explicitly illustrate the intimate relationship between geoscience and sustainability that is often opaque to students. The authors of these chapters are faculty members, administrators, program directors, and researchers from institutions across the country who have collectively envisioned, implemented, and evaluated effective change in their classrooms, programs, institutions, and beyond. This book provides guidance to anyone interested in implementing change on scales ranging from a single course to an entire program by infusing sustainability across the curriculum, broadening access to Earth and environmental sciences, and assessing the impacts of those changes. **Earth Science for Civil and Environmental Engineers** Richard E.
