

**DIRECTION OF WEIGHT:**

Q1. The figure on the right depicts the Earth, points A to H are different points on the surface of the Earth. The center of the Earth is shown by the plus sign. Let's assume we put a mass at each point. Weight is anything acts vertically downwards towards the center of the Earth. Draw vectors at each point to show the direction of weight at each point. Weight is defined as the gravitational force acting on an object. What is the direction of gravitational force at each point? Is it the same as the direction of weight?

**DIRECTION OF VELOCITY:**

Q2. If an object is moving in a circular path, at any point, the velocity is given by tangent to the circle at that particular point. At points A to H draw vectors to show the direction of velocity vectors.

Q3. Draw velocity vectors for an object moving in a circular clockwise direction.

**CENTRIPETAL FORCE:** An object can move in a circle only if there is a net force on it directed towards the center of the circle. This force is called the centripetal force. It is provided by gravity or by tension force in a string.

**CENTRIPETAL ACCELERATION:** Acceleration provided by the centripetal force is called centripetal acceleration. Its direction is the same as the direction of centripetal force according to Newton's Second Law.

Q4. Let the plus sign be the Earth and the circular path show the motion of a satellite in an orbit around the Earth. At points A to H, draw vectors showing the direction of gravitational force acting on the satellite. Also draw vectors to show the direction of velocity of the satellite at various points in the orbit. Now show the direction of centripetal acceleration at each point.

Q5. Suppose you are whirling a round a stone connected to a string in a clockwise direction. Draw the direction of tension force at each point. (Tension force always acts along the string and its direction is towards the support to which the string is attached.) Also draw the direction of acceleration due to tension at each point. Lastly draw the direction of velocity of the stone at each point along the circle.

Velocity is speed in a given direction. Suppose something is moving in a circular path with a constant speed. Is the magnitude of the speed changing at every point? Is the direction of speed changing at every point? Is there any acceleration there? What is the direction of acceleration? What is the direction of resultant force acting on the object moving in a circle?
