Advances in Structural Optimization J. Herskovits,2012-12-06 Advances in Structural Optimization presents the techniques for a wide set of applications ranging from the problems of size and shape optimization historically the first to be studied to topology and material optimization Structural models are considered that use both discrete and finite elements Structural materials can be classical or new Emerging methods are also addressed such as automatic differentiation intelligent structures optimization integration of structural optimization in concurrent engineering environments and multidisciplinary optimization For researchers and designers in industries such as aerospace automotive mechanical civil nuclear naval and offshore A reference book for advanced undergraduate or graduate courses on structural optimization and optimum design

Direct Methods for Limit and Shakedown Analysis of Structures Paolo Fuschi,Aurora Angela Pisano,Dieter Weichert,2015-01-06 Articles in this book examine various materials and how to determine directly the limit state of a structure in the sense of limit analysis and shakedown analysis Apart from classical applications in mechanical and civil engineering contexts the book reports on the emerging field of material design beyond the elastic limit which has further industrial design and technological applications Readers will discover that Direct Methods and the techniques presented here

can in fact be used to numerically estimate the strength of structured materials such as composites or nano materials which represent fruitful fields of future applications. Leading researchers outline the latest computational tools and optimization techniques and explore the possibility of obtaining information on the limit state of a structure whose post elastic loading path and constitutive behavior are not well defined or well known. Readers will discover how Direct Methods allow rapid and direct access to requested information in mathematically constructive manners without cumbersome step by step computation. Both researchers already interested or involved in the field and practical engineers who want to have a panorama of modern methods for structural safety assessment will find this book valuable. It provides the reader with the latest developments and a significant amount of references on the topic.

New Trends in Shape Optimization Aldo Pratelli, Günter Leugering, 2015-12-01. This volume reflects New Trends in Shape Optimization and is based on a workshop of the same name organized at the Friedrich Alexander University Erlangen N rnberg in September 2013. During the workshop senior mathematicians and young scientists alike presented their latest findings. The format of the meeting allowed fruitful discussions on challenging open problems and triggered a number of new and spontaneous collaborations. As such the idea was born to produce this book each chapter of which was written by a workshop participant often with a collaborator. The content of the individual chapters ranges from survey papers to original articles some focus on the topics discussed at the Workshop while others involve arguments outside its scope but which are no less relevant for the field today. As such the book offers readers a balanced introduction to the emerging field of shape optimization.

Engineering Optimization 2014 Hélder Rodrigues, José Herskovits, Christóvão Mota Soares, José Miranda Guedes, Aurelio Araujo, João Folgado, Filipa Moleiro, José Aguilar Madeira, 2014-09-26. Modern engineering processes and tasks are highly complex multi and interdisciplinary requiring the cooperative effort of different specialists from engineering mathematics computer science and even social sciences. Optimization methodologies are fundamental instruments to tackle this complexity giving the possibility to unite synergistically team members inputs and thus decisively contribute to solving new engineering technological challenges. With this context in mind the main goal of Engineering Optimization 2014 is to unite engineers applied mathematicians computer and other applied scientists working on research development and practical application of optimization methods applied to all engineering disciplines in a common scientific forum to present analyze and discuss the latest developments in this area. Engineering Optimization 2014 contains the edited papers presented at the 4th International Conference on Engineering Optimization ENGOPT2014 Lisbon Portugal 8 11 September 2014. ENGOPT2014 is the fourth edition of the biennial International Conference on Engineering Optimization. The first conference took place in 2008 in Rio de Janeiro the second in Lisbon in 2010 and the third in Rio de Janeiro in 2012. The contributing papers are organized around the following major themes: Numerical Optimization Techniques Design Optimization and Inverse Problems Efficient Analysis and Reanalysis Techniques Sensitivity Analysis Industrial Applications Topology Optimization For Structural Static and
