

Concept-Development Practice Page

35-2

Compound Circuits

1. The initial circuit, below left, is a compound circuit made of a combination of resistors. It is reduced to a single equivalent resistance by the three steps, the circuits to its right, *a*, *b*, *c*. In step *a*, show the equivalent resistance of the parallel $4\text{-}\Omega$ resistors. In step *b* combine this in series with the $3\text{-}\Omega$ resistor. In step *c*, combine the last parallel pair to obtain the equivalent resistance of the circuit. (Note the similarity of this circuit and Figure 35-10 in your textbook.)

2. The circuit below is similar to Figure 35-11 in your textbook. In three successive steps, as in Question 1, replace each pair of resistors by a single resistor of equivalent resistance.

3. Find the equivalent resistance of these three circuits.

 $R = \underline{\hspace{2cm}}$
