Bronco Brown wants to put $Ft = \Delta mv$ to the test and try bungee jumping. Bronco leaps from a high cliff and experiences 3 s of free fall. Then the bungee cord begins to stretch, reducing his speed to zero in 2 s. Fortunately, the cord stretches to its maximum length just short of the ground below.

Fill in the blanks:

Bronco's mass is 100 kg.

Acceleration of free fall is 10 m/s^2 .

Express values in SI units (distance in m, velocity in m/s, momentum in kg·m/s, impulse in N·s, and deceleration in m/s^2).

$$d = \frac{1}{2} at^2$$

The 3-s free-fall distance of Bronco just before the bungee cord begins to stretch = _____

Δmv during the 0 to 3-s interval of free fall = _____

Δmv during the 3 to 5-s of slowing down = _____

Impulse during the 3 to 5-s of slowing down = _____

Average force exerted by the cord during the 3 to 5-s interval of slowing down = _____

How about work and energy? How much KE does Bronco have 3 s after he first jumps?

How much does gravitational PE decrease during this 3 s?

What two kinds of PE are changing during the 3 to 5-s slowing-down interval?

University Physics: Australian edition Hugh D Young, Roger A Freedman, Ragbir Bhathal, 2010-08-04 This book is the product of more than half a century of leadership and innovation in physics education When the first edition of University Physics by Francis W Sears and Mark W Zemansky was published in 1949 it was revolutionary among calculus based physics textbooks in its emphasis on the fundamental principles of physics and how to apply them The success of University Physics with generations of several million students and

educators around the world is a testament to the merits of this approach and to the many innovations it has introduced subsequently In preparing this First Australian SI edition our aim was to create a text that is the future of Physics Education in Australia We have further enhanced and developed University Physics to assimilate the best ideas from education research with enhanced problem solving instruction pioneering visual and conceptual pedagogy the first systematically enhanced problems and the most pedagogically proven and widely used online homework and tutorial system in the world Mastering Physics

American Journal of Physics, 2002 **Mass and Motion in General Relativity** Luc Blanchet, Alessandro Spallicci, Bernard Whiting, 2011-01-19 From the infinitesimal scale of particle physics to the cosmic scale of the universe research is concerned with the nature of mass While there have been spectacular advances in physics during the past century mass still remains a mysterious entity at the forefront of current research Our current perspective on gravitation has arisen over millennia through the contemplation of falling apples lift thought experiments and notions of stars spiraling into black holes In this volume the world's leading scientists offer a multifaceted approach to mass by giving a concise and introductory presentation based on insights from their respective fields of research on gravity The main theme is mass and its motion within general relativity and other theories of gravity particularly for compact bodies Within this framework all articles are tied together coherently covering post Newtonian and related methods as well as the self force approach to the analysis of motion in curved space time closing with an overview of the historical development and a snapshot on the actual state of the art All contributions reflect the fundamental role of mass in physics from issues related to Newton's laws to the effect of self force and radiation reaction within theories of gravitation to the role of the Higgs boson in modern physics High precision measurements are described in detail modified theories of gravity reproducing experimental data are investigated as alternatives to dark matter and the fundamental problem of reconciling any theory of gravity with the physics of quantum fields is addressed Auxiliary chapters set the framework for theoretical contributions within the broader context of experimental physics The book is based upon the lectures of the CNRS School on Mass held in Orlans France in June 2008 All contributions have been anonymously refereed and with the cooperation of the authors revised by the editors to ensure overall consistency
