

Onion Cell and Cheek Cell Lab

Background:

Onion skin cells have many rectangular cells that are easy to see under a light microscope. Many of the organelles cannot be seen with a light microscope because they are generally clear or too small. However, you can observe the cell wall, nucleus, and cytoplasm. The cell membrane is right inside the cell wall. The cheek cell does not always have a uniform shape and some may be clumped together or smashed. These are harder to focus on and you may need to rotate the diaphragm to limit the amount of light entering. These are also generally clear. You can see the cell membrane, nucleus, and cytoplasm.

Materials:

2 clean slides	2 eye droppers
2 clean slide covers	2 plastic cups
A toothpick	Light Microscope
Bromothymol blue	Onion
Iodine	Cheek cell

Procedures:

Part A: Onion Cell

Obtain a small piece of onion skin from teacher and a cup of iodine. Place the onion skin on a clean slide and use one of the eye droppers to place a small drop of iodine on the onion skin. Do not drench the onion skin, one drop is plenty. Carefully place the slide cover on the slide trying not to have any air bubbles under the slide. View the slide under the microscope using low power. Work your way to higher views. **Remember** do not use the coarse focus on high power! Draw what you see under 4x, 10x, and 40x. Pick a cell and label the parts you can see.

Part B: Cheek Cell

Obtain a cup of Bromothymol blue from the teacher. One lab member needs a clean toothpick. Carefully rub the toothpick on the inside of your cheek. These cells are constantly being replaced in your mouth so what you take would be gone by the end of the day anyway. Do NOT stab your mouth with the toothpick. It will not look like any
