Waves: sublevels 2 and 3

1. A wave is introduced into a medium and a snapshot of the medium at a particular instant in time is shown at the right. Several positions along the medium are labeled. Categorize the positions as either crests or troughs.

Crests: B, ETroughs: D, GNeither: A, C, F, H, I, J

2. The wavelength of the wave in the diagram below is given by letter A and the amplitude of the wave in the diagram below is given by letter D.

3. A sine curve that represents a transverse wave is drawn below. Use the centimeter ruler to measure the wavelength and amplitude of the wave (show units).

a. Wavelength = 3.8 cmb. Amplitude = 1.7 cm - 0.8 cm = 0.9 cm

4. The number of cycles of a periodic wave per unit time is called the wave's frequency.
5. Any repeated and periodic motion can be described by a frequency. For instance, the frequency of rotation of a second hand on a clock is

a. 1/60 Hz

b. 1/12 Hz

c. 1/2 Hz

d. 1 Hz e. 60 Hz

6. A pendulum makes 40 vibrations in 20 seconds. Calculate its period?

$$f = \frac{40}{20} = 2$$

$$T = \frac{1}{f} = \frac{1}{2} = 0.5 \text{ s}$$

TIP

Throughout this unit, internalize the meaning of terms such as period, frequency, wavelength and speed. Utilize the meaning of these terms to answer conceptual questions; avoid formula fixation.

Grometstein,2012-12-06 Grometstein explains modern physics with enthusiasm wit and insight As he presents the usual milestones in the history of modern physics his central focus is the historical debate regarding the nature of light is it a particle or is it a wave This book will be read by generations of students in physical science who seek a well written discussion of these important issues Grometstein includes material which is quite recent thus making the present volume particularly useful *Constructing Gardens, Cultivating the City* Amanda Shoaf Vincent,2023-05-16 Constructing Gardens Cultivating the City is the first cultural history of major new parks developed in Paris in the late twentieth century as part of the city s program of adaptive reuse of industrial spaces Thanks to laws that gave the city more political autonomy Paris s local government launched a campaign of park creation in the late 1970s that continued to the turn of the millennium The parks in this book represent this campaign and illustrate different facets of their cultural and historical context Archival research interviews and analyses of the parks reveal how postmodern debates about urban planning the historic city public space and nature s presence in an urban setting influenced their designs In sum the city adopted the garden as a model for public parks investing in complex richly symbolic and representational spaces These parks were intended to represent contemporary twists on traditional designs and serve local residents as much as they would contribute to Paris s role as a world city The parks development process often included points of conflict pointing to differing views on what Parisian space should represent and fundamental contradictions between the characteristics of public space and the garden as it is traditionally defined These parks demonstrate the ongoing cultivation of the city over time in which transformed sites not only fulfil new functions but also engage with history and their surroundings to create new meaning They stand for landscape as a form of signifying cultural production that directly engages with other art forms and ways of knowing Just as the Luxembourg Gardens the Tuileries and the Buttes Chaumont parks exemplify their eras cultural dynamics such parks as the Jardin Atlantique Parc Andr Citro n and the Jardin des Halles express contemporary French culture within the archetypal space of their era the city Finally they point the way to current trends in landscape architecture such as citizen gardening and ecological initiatives **Open Science** Shelagh Ross,Eileen Scanlon,1995-11-28 This book explores the particular challenges of teaching and learning science at a distance It discusses the principles of instructional design informed by studies of the ways in which conceptual and process based skills are developed by science learners and suggests how structural issues in the selection of course content may be addressed Focusing mainly on examples drawn from undergraduate teaching successive chapters illustrate a wide range of instructional media and techniques and show how

multiple media courses can be assembled to form a coherent whole The issues of student assessment course evaluation and quality audit are also examined

Quantum Mechanics, Fourth Edition Alastair I. M. Rae, 2002-05-20 Continuing the exceptional tradition of the previous editions Quantum Mechanics Fourth Edition provides essential information about atomic and subatomic systems and covers some modern applications of the field Supported by a Web page that contains a bibliography color versions of some of the illustrations and links to other relevant sites the book shows how cutting edge research topics of quantum mechanics have been applied to various disciplines It first demonstrates how to obtain a wave equation whose solutions determine the energy levels of bound systems The theory is then made more general and applied to a number of physical examples Later chapters describe the connection between relativity and quantum mechanics give some examples of how quantum mechanics has been used in information processing and finally discuss the conceptual and philosophical implications of the subject New to the Fourth Edition A chapter on quantum information processing that includes applications to the encryption and de encryption of coded messages A chapter on relativistic quantum mechanics and introductory quantum field theory Updated material on the conceptual foundations of quantum physics containing discussions of non locality hidden variables and parallel universes Expanded information on tunneling microscopy and the Bose Einstein condensate Presenting up to date information on the conceptual and philosophical aspects of quantum mechanics this revised edition is suitable both for undergraduates studying physics chemistry or mathematics and for researchers involved in quantum physics
