Organizations are commonly thrust into hostile operating environments where they are required to make strategic decisions that involve significant and costly tradeoffs Such hostile environments may be endemic such as an economic recession or idiosyncratic such as a predatory action by an adversary Many features of such hostile environments parallel those of living organisms that also demonstrate fine tuned strategies to improve their survivability under adverse conditions How can organizations use these bioinspired strategies to survive and even potentially innovate This book shows that the same three capabilities essential for the survival of living organisms in harsh environments efficiency resilience and prominence are also critical for organizations in their process of navigating through their own hostile environments Throughout the book the authors provide organizational executives with a systematic framework for thinking about strategic decision making in a hostile environment leaning on analysis of real world cases to draw out ontologies and methods for guiding their teams through disruptions change management innovation and process improvements In the first part organizations are provided with a systematic approach to analyzing three survivability influences forces resources and observers and their interrelationships While all three influences are active across all organisms and organizations the exact nature of their

interrelationship and the significance of each influence are unique to every organism or organization. The framework helps organizations nail down the specific features of their operating environment that can help or hinder survivability by analyzing the three influences. Organizations can respond to external influences by developing three pronged capabilities: efficiency, resilience, and prominence. ERP that respond to the three survivability influences. Organizations often struggle with identifying the appropriate strategies to apply under different conditions. Fortunately, nature provides several mechanisms that can be analogically applied to guide business strategies. The book contains many illustrations and examples of strategic principles observed among living organisms that can help an organization develop ERP capability. Finally, the book introduces seven strategic design heuristics: Combination, Elimination, Separation, Segmentation, Replication, Dynamics, and Maximization, observed in a living system that can be flexibly utilized to generate ideas to achieve strategic ends.

Artificial Intelligence in Price Management. A Qualitative

Assessment of Potentials, Risks and Impacts Lennard Heyder, 2024-12-05 Master's Thesis from the year 2024 in the subject Business economics Information Management grade 1.0 Otto Beisheim School of Management Vallendar Chair of Strategy and Marketing course Price Management language English abstract This thesis explores the transformative role of Artificial Intelligence (AI) in price management, focusing on its impact across the four key phases: strategy analysis, decision making, and implementation, as defined by Simon and Fassnacht. The motivation for this research arises from a gap in existing literature: no conceptual framework currently addresses AI's specific impacts on each phase of the price management process. The primary aim is to assess AI's influence, including opportunities, risks, and structural changes within each phase. Two research questions guide this study: What phase-specific value propositions and risk factors will AI introduce in each of the four price management phases? How can these impacts be synthesized into a comprehensive decision-making framework? To address these questions, a narrative literature review of recent studies (2022-2024) was conducted, culminating in a structured framework. This framework provides a cross-industry overview of AI applications in pricing, equipping organizations with a practical tool to evaluate their pricing strategies and make informed decisions about AI integration. The framework presents a varied value-risk profile across phases, helping organizations identify where AI can best support pricing and where risks, such as algorithmic bias and transparency issues, require oversight. A phased approach to AI adoption is recommended, beginning with phases where AI supports human judgment to limit risk. Higher levels of automation and decision authority can be introduced later to maximize efficiency and value, provided there is a balanced approach to risk, technological maturity, and alignment with organizational goals.
