Evolution of Learning and Memory Mechanisms Mark A. Krause, Karen L. Hollis, Mauricio R. Papini, 2022-05-19 Evolution of Learning and Memory Mechanisms is an exploration of laboratory and field research on the many ways that evolution has influenced learning and memory processes such as associative learning social learning and spatial working and episodic memory systems This volume features research by both outstanding early career scientists as well as familiar luminaries in the field Learning and memory in a broad range of animals are explored including numerous species of invertebrates insects worms sea hares as well as fish amphibians birds rodents bears and human and nonhuman primates Contributors discuss how the behavioral cognitive and neural mechanisms underlying learning and memory have been influenced by evolutionary pressures They also draw connections between learning and memory and the specific selective factors that shaped their evolution Evolution of Learning and Memory Mechanisms should be a valuable resource for those working in the areas of experimental and comparative psychology comparative cognition brain behavior evolution and animal behavior

Psychology Study Guide Richard B. Stalling, Wayne Weiten, Ronald E. Wasden, 2006-02 By Richard Stalling and Ronald Wasden of Bradley University this study guide includes a review of key ideas people and terms complete with fill in the blank short answer and matching questions This is followed by a self quiz made up of multiple choice questions The Study Guide is organized around learning objectives those same learning objectives that are included in the test bank

Subject Guide to Books in Print, 1997 **Individual differences in associative learning** Robin A. Murphy, Rachel M. Msetfi, 2014-09-24 Theories of associative learning have a long history in advancing the psychological account of behavior via cognitive representation There are many components and variations of associative theory but at the core is the idea that links or connections between stimuli or responses describe important aspects of our psychological experience This Frontiers Topic considers how variations in association formation can be used to account for differences between people elaborating the differences between males and females differences over the life span understanding of psychopathologies or even across cultural contexts A recent volume on the application of learning theory to clinical psychology is one example of this emerging application e g Hazelgrove Hogarth 2012 The task for students of learning has been the development often with mathematically defined explanations of the parameters and operators that determine the formation and strengths of associations The ultimate goal is to explain how the acquired representations influence future behavior This approach has recently been influential in the field of neuroscience where one such learning operator the error correction principle has unified the understanding of the conditions which facilitate neuron activation with the computational goals of the brain with properties of learning algorithms e g Rescorla Wagner 1972 In this Frontiers Research Topic we are interested in a similar but currently developing aspect to learning theory which is the

application of the associative model to our understanding of individual differences including psychopathology In general learning theories are monolithic the same theory applies to the rat and the human and within people the same algorithm is applied to all individuals If so this might be thought to suggest that there is little that learning theory can tell us about the how males and females differ how we change over time or why someone develops schizophrenia for instance However these theories have wide scope for developing our understanding of when learning occurs and when it is interfered with along with a variety of methods of predicting these differences We received contributions from researchers studying individual differences including sex differences age related changes and those using analog or clinical samples of personality and psychopathological disorders where the outcomes of the research bear directly on theories of associative learning This Research Topic brings together researchers studying basic learning and conditioning processes but in which the basic emotional attentional pathological or more general physiological differences between groups of people are modeled using associative theory This work involves varying stimulus properties and temporal relations or modeling the differences between groups

Learning and Behavior Lewis M. Barker, 1997 Student friendly in approach this text provides an integrative multidisciplinary look at how and why humans and non human animals learn and behave as they do It offers comprehensive balanced coverage of learning and behaviour theory methodology and research with an emphasis on their application to human learning and behaviour from biological psychological behavioural and sociocultural perspectives **The Publishers' Trade List Annual**, 1985 **Psychology: Core Concepts Fifth Edition**, 2005-08 *The Essentials of Conditioning and Learning* Michael Domjan, 1996 Michael Domjan one of the top researchers in his field presents a concise current book of the principles of conditioning and learning perfect for professors and students alike who want an accurate and detailed account of learning and conditioning the essentials without excessive research and detail *Principles of Psychology* Matt Jarvis, Paul Okami, 2020 *Principles of Psychology Contemporary Perspectives* offers students a complete introduction to psychology It balances contemporary approaches with classic perspectives weaves stimulating conceptual issues throughout the text and encourages students to think critically creatively and practically about the subject and how it applies to the real world It opens with an introduction to the study of psychology at undergraduate level and the positioning of psychology as a science including coverage of some of its methods before going on to look at the core domains of study typical in many European programmes and set out in the British Psychological Society guidelines The carefully developed pedagogical scheme is focused on getting students to think critically about the subject and to engage with its methodological elements and on demonstrating real world relevance Digital formats and resources *Principles of Psychology Contemporary Perspectives* is supported by online resources and is available for students and institutions to purchase in a variety of formats The e book is enhanced with embedded self assessment activities and multi media content including animations concept maps and flashcards to offer a fully immersive experience and extra learning support www.oxfordtextbooks.co.uk/ebooks The

study tools that enhance the e book along with web links to guide further reading are also available as stand alone resources for use alongside the print book Here lecturers can access a Lecturer s Guide to the book alongside downloadable PowerPoints images and Test Banks for use in their teaching **Books in Print Supplement** ,2002 **Medical Books and Serials in Print** ,1984 *Bibliographic Guide to Education* ,1986 **Animal Learning & Behavior** ,1986
