Field instruction has traditionally been at the core of the geoscience curriculum. The field experience has been integral to the professional development of future geoscientists and is particularly important as it applies to student understanding of spatial, temporal, and complex relations in the Earth system. As important as field experiences have been to geosciences education and the training of geoscientists, the current situation calls for discipline-wide reflection of the role of field experiences in the geoscience curriculum in light of practical and logistical challenges, evolution in employment opportunities for geoscientists, and changing emphases in the geoscience curriculum. This volume seeks to broaden participation in field instruction by showcasing diverse approaches to teaching in the field across the many geo-disciplines encompassed by GSA books.google. The Tap Dance Dictionary Mark Knowles, 2011-12-14. The language of tap dancing is as rich and varied as that of any art, and different choreographers, teachers, and performers often use totally different terms for exactly the same step. The various names of all steps and clear descriptions of them are collected for the first time in this reference work. The emphasis is on all variations of a name, from universally recognized terms to simple pet names that individual performers and choreographers have created, with extensive cross-references provided. Each of the steps is fully described with appropriate counts, explanations, and history. Many antique and unusual steps, such as the Patting Juba, the Quack, and the Swanee Shuffle, are included.
