OUR SOLAR SYSTEM

Our solar system is made up of the Sun and everything that orbits it. That includes eight planets, many moons, and smaller objects called asteroids and comets. The planets orbit the Sun in a path called an orbit. Some of the planets have rings. The planets have different sizes, colors, and shapes. Some have different moons and rings.

WHAT IS THE ASTEROID BELT?

Asteroids are rocky objects that are left over from the formation of the solar system. They are found in a belt between Mars and Jupiter. Some asteroids are very small, while others are very large. Some asteroids have moons. Some asteroids have rings. Some asteroids have tails. Some asteroids have other features.

Here is a diagram to describe the order of the planets.
