

3: Aggregate Demand, Supply and Inflation

1. Imagine that the UK adopts the euro, and interest rates are set by the European Central Bank.
 - a. Are euro interest rates likely to be adjusted to help stabilize either UK inflation or UK output?
 - b. What automatic mechanisms, if any, can still achieve these outcomes?
 - c. Would UK fiscal policy be able to help more?
2. **Exam-Style Question:** Answer the following questions about the AS-AD model.
 - a. *[8 marks]* The aggregate demand and aggregate supply diagram has output on the horizontal axis and inflation on the vertical axis. Explain the derivation of the aggregate demand schedule from the IS schedule and monetary policy. Why is it downward sloping? Explain your answer mathematically.
 - b. *[8 marks]* What causes movements along the aggregate demand schedule? What happens to the aggregate demand schedule if government expenditure increases and tax revenue does not change? What happens to the aggregate demand schedule if the target inflation rate is increased?
 - c. *[6 marks]* What is the shape of the aggregate supply curve if prices and wages are completely flexible. What determines potential output?
 - d. *[8 marks]* Suppose that economy starts at a point where aggregate demand and short and long aggregate supply are all equal. The central bank then tightens monetary policy in order to reduce the rate of inflation. Use a diagram to discuss what happens to aggregate demand and supply in the short and long run.
3. **Exam-Style Question:** Answer the following questions about inflation.
 - a. *[6 marks]* The Phillips curve diagram has unemployment on the horizontal axis and inflation on the vertical axis. Professor Phillips of the London School of Economics published a paper in 1958 showing a statistical relationship between annual inflation and employment with low unemployment when inflation was high and high unemployment when inflation was low. Why do economists now believe about the shape of the long run the Phillips curve? Why is the short run Phillips curve downward sloping? Where do the long and short run Phillips curves intersect?
 - b. *[8 marks]* What is the mathematical relationship between inflation J_t , expected inflation J_t^e , actual employment U and equilibrium employment U^* that describes the short run Phillips curve? What happens to the long run and short run Phillips curve if expected inflation increases? Can governments in this model reduce unemployment by increasing inflation in a predictable way?
 - c. *[8 marks]* What are the costs of anticipated and unanticipated inflation?
 - d. *[8 marks]* Is deflation (a negative rate of inflation) desirable?
