<p>Paper 9691/01 Written Paper 1</p>
--

## General comments

The paper worked well at discriminating between candidates of differing abilities. All questions attracted the full range of marks available, so no marks were inaccessible to all candidates.

The questions appeared to be fair and were unambiguously worded. There were questions, notably 3 and 9, where candidates wrote down everything that they knew on the topic and then found themselves in the uncomfortable position of having nothing to say in later parts.

The use of proprietary brand names, particularly for software suggestions is beginning to creep back into responses and should be stopped. Examiners do not penalise this except to the extent that such responses are not worthy of credit. On a similar tack, there were many candidates who failed to answer much of the second half of the paper within the context of the oil exploration scenario. Hospitals, banks and even chess playing were used as examples rather than the scenario given and could not gain the marks available. Centres have to use example applications in their teaching but candidates should be aware that other scenarios exist which are sensible and that the scenario used in the examination paper is unlikely to be the one that was used when they were being taught.

Some candidates appeared to run out of time although it is possibly a failure to be able to respond to the later questions rather than lack of time. Some candidates spent too long attempting the algorithm question and this made them short of time towards the end of the paper. It is important that candidates understand that some of the skill in sitting an exam paper is exam technique and these candidates were demonstrating a distinct lack of that technique. The advice with the algorithm question is that it really should be attempted at the end of the examination, or the candidate should restrict themselves to the extra half hour that was the time which was allocated to the question when it was introduced in the revised format of the syllabus.

## Comments on specific questions

### **Question 1**

- (a) Mainly well answered. Some candidates simply said that a form-based computer interface has a form. This is obviously not worthy of credit and candidates should beware of simply copying the question down as the answer. A full set of acceptable responses is available to Centres in the published mark scheme to which their attention is drawn.
- (b) Too many 'drawing' applications were given without a justification. The form-based application was better answered despite the fact that it is actually the more difficult one.
- (c) The question asked for the hardware and software of the HCI, not of the entire computer system. When considered in context there is only one acceptable response for each.

### **Question 2**

- (a) Well answered, though a significant number failed to add the leading 0 and some candidates put the 0 at the wrong end of the number.
- (b) The question was clearly about stock control in a warehouse. It had nothing to do with POS or prices or sell by dates. Whilst some of the marks were available if a candidate answered in this way, they had not read or answered the question as printed on the question paper.
