

**Concept-Development
Practice Page****9-1****Work and Energy**

1. How much work (energy) is needed to lift an object that weighs 200 N to a height of 4 m?

800 J

2. How much power is needed to lift the 200-N object to a height of 4 m in 4 s?

200 W

3. What is the power output of an engine that does 60,000 J of work in 10 s?

6 kW

4. The block of ice weighs 500 newtons.

- a. What is the mechanical advantage of the incline?

2:1

- b. How much force is needed to push it up the incline (neglect friction)?

250 N

5. All the ramps are 5 m high. We know that the KE of the block at the bottom of the ramp will be equal to the loss of PE (conservation of energy). Find the speed of the block at ground level in each case. [Hint: Do you recall from earlier chapters how long it takes something to fall a vertical distance of 5 m from a position of rest (assume $g = 10 \text{ m/s}^2$)? And how much speed a falling object acquires in this time? This gives you the answer to Case 1. Discuss with your classmates how energy conservation gives you the answers to Cases 2 and 3.]

Case 1: Speed = 10 m/s Case 2: Speed = 10 m/s Case 3: Speed = 10 m/s

Block on A reaches bottom first; greater acceleration and less ramp distance. Although it will have the same speed at bottom, the time it takes to reach that speed is different!

Concept Development Practice Page Work And Energy:

Environmental Management Technology-Development Program at the Department of Energy National Research Council, Division on Earth and Life Studies, Commission on Geosciences, Environment and Resources, Committee on Environmental Management Technologies, 1996-03-29 This book provides the National Academy of Sciences 1995 review of the technology development program for the remediation of the Department of Energy's weapons complex facilities. It makes scientific, technical, and programmatic recommendations to strengthen technology development within DOE and ensure that it meet its goals of cost effectiveness, safety, and decreased risk. The recommendations address DOE's five focus areas: landfill stabilization, contaminant plume containment and remediation, facility transitioning, decommissioning and final disposition, mixed waste characterization, treatment and high level waste in tanks. The book also addresses technologies in areas that cross cut the above focus area programs, namely characterization, monitoring and sensor technologies, efficient separations and processing, robotics and waste disposal.

The Pedagogy of Confidence Yvette Jackson, 2015-04-24 In her new book, prominent professional developer Yvette Jackson focuses on students' strengths rather than their weaknesses to reinvigorate educators to inspire learning and high intellectual performance. Through the lens of educational psychology and historical reforms, Jackson responds to the faltering motivation and confidence of educators in terms of its effects on closing the achievement gap. The author seeks to rekindle the belief in the vast capacity of underachieving urban students and offers strategies to help educators inspire intellectual performance. Jackson proposes that a paradigm shift towards a focus on strengths will reinvigorate educators' passion for teaching and belief in their ability to raise the intellectual achievement of their students. Jackson addresses how educators can systematically support the development of motivation, reflective and cognitive skills, and high performance when standards and assessments are predisposed to non-conceptual methods. Furthermore, she examines challenges and offers strategies for dealing with cultural disconnects, the influence of new technologies, and language preferences of students.
