 Jacques Barbet,Adrien Foucquier,Yves Thomas,2020-02-25 The combined effects of population growth and aging have led to  
 an increase in the number of cancers Preventing diagnosing treating and curing cancer are therefore more than ever  
 imperatives facing medicine especially to continue the decrease in cancers mortality rates and to improve the quality of  
 survival Over time the classic modes of treatment surgery external beam radiotherapy chemotherapy have become more  
 refined and efficient From the beginning of this century new therapeutic options have been developed targeted cancer  
 therapy targeted radionuclide therapy and immunologic therapies based on monoclonal antibodies cellular therapy and  
 vaccinations Artificial intelligence and machine learning are also being introduced to the field of oncology Starting with the  
 basic scientific principles relevant to oncology this book explains and makes these concepts and innovations accessible to a  
 wide audience especially in the interest of patients It also contributes to the oncological field of 4P medicine with 4P standing

 Mukesh,Aastha Sobti,2022-12-29 High throughput molecular technologies omics can help to decipher the contributions of  
 different physiological systems and identify candidate molecules that are representative of different physiological pathways  
 thereby allowing the discovery of biomarkers Notably the omics technologies along with and computational methods  
 bioprospecting and artificial intelligence will continue to lead to better understanding of biological mechanisms that are  
 responsible for physical attributes or phenotypes Research breakthroughs obtained through these technologies can be used  
 to enhance productivity of food animals meet the increasing demand for animal sourced foods enhance high quality nutrient  
 availability ensure nutrient safety mitigate the effects of climate variability and result in new technologies that provide  
 continued improvement in food security worldwide Such breakthroughs are an urgent necessity because over the past 50  
 years there has been an unprecedented increase in the world s population which will reach ten billion by the year 2050  
 Innovative and technological advancements that enhance all aspects of food production will arise from basic fundamental  
 research Besides food animal by products have found many applications in the fields of pharmaceuticals cosmetics and  
 household and industrial products Hence the need to ameliorate the productivity reproductivity growth performance and  
 disease resistance in animals has created a worldwide interest in gaining a deeper understanding of animal biology
