3. In which position(s) is there momentarily no work being done on the satellite by the force of gravity? Why?

4. Work changes energy. Let the equation for work,  $W = Fd$ , guide your thinking on the following. Defend your answers in terms of  $W = Fd$ .

a. In which position will a several-minutes thrust of rocket engines pushing the satellite forward do the most work on the satellite and give it the greatest change in kinetic energy? (Hint: Think about where the most distance will be traveled during the application of a several-minutes thrust.)

b. In which position will a several-minutes thrust of rocket engines pushing the satellite forward do the least work on the satellite and give it the least boost in kinetic energy?

c. In which position will a several-minutes thrust of a retro-rocket (pushing opposite to the satellite's direction of motion) do the most work on the satellite and change its kinetic energy the most?
