Electromagnetic Induction: Conceptual and Experiment for Students Engagement Lab

Faraday's Electromagnetic Lab

Purpose

To understand the concept of magnetic induction, its applications, and the factors affecting it, through conceptual and experimental work.

Objectives

After this lab, the students will be able to: (1) understand the concept of magnetic induction, (2) understand the factors affecting it, and (3) understand its applications.

Introduction

When a wire is moved through a magnetic field, an electric current is induced in the wire. This is called electromagnetic induction. It is the process by which a changing magnetic field induces an electric current in a wire. This is the basic principle of the operation of many electrical devices, including generators, transformers, and induction motors.

The application of electromagnetic induction is the subject of this experiment. The purpose of this experiment is to understand the factors affecting electromagnetic induction, and to understand its applications. The experiment is divided into two parts: (1) understanding the factors affecting electromagnetic induction, and (2) understanding its applications.

The first part of the experiment is to understand the factors affecting electromagnetic induction. This is done by measuring the induced current in a wire as a function of the magnetic field, the area of the wire, and the rate of change of the magnetic field.

Procedure

Part 1: Understanding

Step 1: Turn the switch on. The induced current in the wire is measured. The induced current is measured as a function of the magnetic field, the area of the wire, and the rate of change of the magnetic field.

Step 2: Turn the switch off. The induced current in the wire is measured. The induced current is measured as a function of the magnetic field, the area of the wire, and the rate of change of the magnetic field.

Step 3: Turn the switch on. The induced current in the wire is measured. The induced current is measured as a function of the magnetic field, the area of the wire, and the rate of change of the magnetic field.
