

## 1. Amplitude Modulation & Demodulation

- Aim:**
1. To generate amplitude modulated wave and determine the percentage modulation.
  2. To Demodulate the modulated wave using envelope detector.

**Apparatus Required:**

| Name of the Component/Equipment             | Specifications/Range | Quantity |
|---|----------------------|----------|
| 1. AM Modulation & Demodulation Trainer kit | FT 1501              | 1        |
| 2. CRO                                      |                      | 1        |
| 3. CRO probes                               |                      | 2        |
| 4. Patch chords                             |                      |          |

**Theory:**

Amplitude Modulation is defined as a process in which the amplitude of the carrier wave  $c(t)$  is varied linearly with the instantaneous amplitude of the message signal  $m(t)$ . The standard form of an amplitude modulated (AM) wave is defined by

$$S(t) = A_c [1 + K_a m(t)] \cos 2\pi f_c t$$

Where  $K_a$  is a constant called the amplitude sensitivity of the modulator

The demodulation circuit is used to recover the message signal from the incoming AM wave at the receiver. An envelope detector is a simple and yet highly effective device that is well suited for the demodulation of AM wave, for which the percentage modulation is less than 100%. Ideally, an envelope detector produces an output signal that follows the envelop of the input signal wave form exactly; hence, the name. Some version of this circuit is used in almost all commercial AM radio receivers.

The Modulation Index is defined as,  $m = (E_{\max} - E_{\min}) / (E_{\max} + E_{\min})$

Where  $E_{\max}$  &  $E_{\min}$  are the maximum and minimum amplitudes of the modulated wave.

Networking and Data Communications Laboratory Manual Frances S. Grodzinsky, 1999 Designed for any introductory networking or data communications course This laboratory manual is designed for the purpose of enhancing the understanding of concepts discussed in a variety of networks and data communications texts This manual represents a work of dedication and collaboration by faculty from universities and colleges across the country

**Basic Electronics Engineering** Satya Sai Srikant, Prakash Kumar Chaturvedi, 2020-04-27 This book is primarily designed to serve as a textbook for undergraduate students of electrical electronics and computer engineering but can also be used for primer courses across other disciplines of engineering and related sciences The book covers all the basic aspects of electronics engineering from electronic materials to devices and then to basic electronic circuits The book can be used for freshman first year and sophomore second year courses in undergraduate engineering It can also be used as a supplement or primer for more advanced courses in electronic circuit design The book uses a simple narrative style thus simplifying both classroom use and self study Numerical values of dimensions of the devices as well as of data in figures and graphs have been provided to give a real world feel to the device parameters It includes a large number of numerical problems and solved examples to enable students to practice A laboratory manual is included as a supplement with the textbook material for practicals related to the coursework The contents of this book will be useful also for students and enthusiasts interested in learning about basic electronics without the benefit of formal coursework

**Radio Receivers for Systems of Fixed and Mobile Communications** Vasiliy V. Logvinov, Sergey M. Smolskiy, 2022-05-13 The textbook acquaints the reader with the architecture of receivers of analog and digital radio systems helps to study the stages of designing a modern radio receiver and reveals the reasons and methods for its effective operation in networks for various purposes Particular attention is paid to the methods of generating and processing signals in the receivers of digital systems with multiple access which make it possible to provide data transfer rates close to the maximum possible according to Shannon As a textbook for students studying methods of optimal signal reception the book will also be useful to specialists in the field of telecommunications involved in the development of radio receivers The book shows how the development of theoretical circuitry and integrated technologies led to the active introduction of algorithmic methods for signal processing changed both the design of receivers and the methods of forming the information flow in free space MIMO beamforming The creation of a global 5G network based on heterogeneous networks puts forward new requirements for the architecture of receivers which are determined by the requirements to achieve high data rates low time delays or use in networks with coordinated multipoint transmission and reception CoMP To consolidate the knowledge gained the book includes a complete set of materials for online classes including questions and answers a guide to solving problems for each chapter and computer modeling units of receivers in the MicroCAP environment based on preliminary calculations
