 articles to help make engineers better educators While a significant body of knowledge has evolved in the field of
 engineering education over the years much of the published information has been restricted to scholarly journals and has not
 found a broad audience This publication rectifies that situation by reviewing the findings of nearly 2 000 scholarly articles to
 help engineers become better educators devise more effective curricula and be more effective leaders and advocates in
 curriculum and research development The author's first objective is to provide an illustrative review of research and
 development in engineering education since 1960 His second objective is with the examples given to encourage the practice
 of classroom assessment and research and his third objective is to promote the idea of curriculum leadership The publication
 is divided into four main parts Part I demonstrates how the underpinnings of education history philosophy psychology
 sociology determine the aims and objectives of the curriculum and the curriculum's internal structure which integrates
 assessment content teaching and learning Part II focuses on the curriculum itself considering such key issues as content
 organization trends and change A chapter on interdisciplinary and integrated study and a chapter on project and problem
 based models of curriculum are included Part III examines problem solving creativity and design Part IV delves into teaching
 assessment and evaluation beginning with a chapter on the lecture cooperative learning and teamwork The book ends with a

 fields of learning philosophy sociology and history as they specifically apply to the process of engineering curriculum
