Guidelines for Determination of Optimal Traffic Responsive Plan Selection Control Parameters ,2005 Closed loop traffic control systems can be operated by either Time of Day TOD mode or Traffic Responsive Plan Selection TRPS mode When properly configured the TRPS mode has the potential to provide an optimal operation due to its ability to accommodate abnormal traffic conditions such as incidents special events and holiday traffic TRPS mode can also reduce the need for frequent

redesign updates to signal timing plans To date there have not been any formal guidelines for selection of robust and optimal TRPS system parameters and thresholds Consequently traffic engineers usually revert to the TOD mode of operation for its ease of setup This report provides a new methodology for robust and optimal selection of TRPS parameters and thresholds The report presents an innovative framework of TRPS system setup following a comprehensive approach that incorporates a multi objective evolutionary algorithm and a supervised discriminant analysis The developed guidelines are presented in simplified tables to facilitate their implementation Guidelines were verified by using hardware in the loop simulations Compared to just the worst possible solutions encountered during the optimization the final solution provided a concurrent savings of 53 percent in delay and 19 percent in stops
