Culvert Manual Guide:

Culvert Design Manual D. Ramsbottom, Rodney Day, C. Rickard, 1997 This publication contains clear and concise guidelines for the hydraulic design of culverts and describes the hydraulic behaviour of culverts in as simple a form as is consistent with the complexities of their actual behaviour **A Guide to Computer Software Tools for Culvert Design and Analysis**, 1999 *Assessment and Rehabilitation of Existing Culverts* David C. Wyant, National Cooperative Highway Research Program, 2002 TRB's National Cooperative Highway Research Program NCHRP Synthesis 303 Assessment and Rehabilitation of Existing Culverts summarizes the state of the practice of pipe assessment the selection of appropriate repair or rehabilitation methods and the management aspects of a pipe program **An Asset Management Approach for Drainage Infrastructure and Culverts** Mohammad Najafi, 2008 Drainage infrastructure systems culvert storm sewer outfall and related drainage elements are mostly buried underground and are in need of special attention in terms of proactive preventive asset management strategy Drainage infrastructure systems represent an integral portion of roadway assets that routinely require inspection maintenance repair and renewal Further challenges are the wide geospatial distribution of these infrastructure assets and environmental exposure There has been considerable research conducted on culverts but mostly looked at the problem from a traditional structural geotechnical perspective Asset management procedures for culverts and drainage infrastructure systems are complex issues and can benefit a great deal from an optimal asset management program that draws from programs pertaining to buried pipes The first and most important step in an asset management initiative is the establishment of mechanism for asset inventory and asset conditions in a format compatible with the routine procedures of field operators and inspectors The first objective of this research project was to develop field protocols and operational business rules for inventory data collection and management and inspection of drainage infrastructures in terms of types of data to be collected frequency of inspection and analysis and reporting mechanisms After review of these protocols by the project oversight committee a pilot study was conducted to verify efficiency of their implementation The condition assessment protocol introduced is useful in evaluating the overall condition of culverts and can be used for decision making regarding the repair renewal or replacement of culverts For the second objective of this project investigators examined the inventory and inspection protocols employed by Ohio Department of Transportation ODOT and developed a decision support platform which establishes a link between the inspection results and appropriate repair renewal and replacement procedures After applying the recommended procedures the transportation agencies can better track the conditions of culverts thereby reducing the risks of culvert failures **Culvert Inspection Manual** James D. Arnoult, 1986 *Popular Hand Book for Cement and Concrete Users* Myron Henry Lewis, Albert Hotchkiss Chandler, 1911 *Bridge Safety, Maintenance, Management, Life-Cycle, Resilience and Sustainability* Joan Ramon Casas, Dan M.  Highway Commission, 1919 The fundamental object of a bridge or culvert survey is to secure information from which to
 determine the type and size of structure to use The information secured must be complete enough to enable the designer
 who is unfamiliar with the bridge site to formulate a decision as to the type and details of the structure best suited to meet

the conditions and to check recommendations The refinements of the survey depend largely upon the local conditions encountered and the type of the proposed structure The engineer securing the notes must be relied upon to obtain complete data even though such information is not specifically mentioned in the outline following It is necessary that every survey be accompanied by a definite recommendation and vice versa Standard forms for sending in the information for design will be supplied by the Commission

Sizing of Highway Culverts and Bridges Bruce M. McEnroe, 2007 This report examines the methods and criteria that highway engineers have used to size culverts and bridges in Kansas and throughout the U S from the start of highway construction to the present The focus is directed to methods actually employed by highway engineers rather than methods described in the research literature Hydrologic methods are categorized as early or modern according to whether a specific recurrence interval is associated with the design Modern hydrologic methods are based on statistical analyses of systematic records of streamflow or rainfall data the desired recurrence interval is an input to the design In the early days culverts and bridges were sized by empirical methods developed from experiences with existing structures during floods

Highway Drainage Guidelines, 1999 **CSP Culvert Installation at Water Crossings on Forest Access Roads** R. G. Wilson, 1996 MacRae's Blue Book and Hendricks' Commercial Register, 1925 Downstream Effects of Culvert and Bridge Replacement Bruce M. McEnroe, 2006 This report presents a framework for evaluation of likely impacts on downstream flooding and channel erosion Two methods for predicting changes in flood peaks are presented and demonstrated in examples The first method which requires flood hydrograph simulation and reservoir routing is applicable to all cases The second method which does not require hydrograph simulation or routing is applicable to culverts that operate under inlet control with no roadway overtopping The effect of detention storage on downstream sediment transport is investigated computationally
