Diangelakis,Efstratios N. Pistikopoulos,2022-06-01 This book presents a comprehensive optimization based theory and framework that exploits the synergistic interactions and tradeoffs between process design and operational decisions that span different time scales Conventional methods in the process industry often isolate decision making mechanisms with a hierarchical information flow to achieve tractable problems risking suboptimal even infeasible operations In this book foundations of a systematic model based strategy for simultaneous process design scheduling and control optimization is detailed to achieve reduced cost and improved energy consumption in process systems The material covered in this book is well suited for the use of industrial practitioners academics and researchers In Chapter 1 a historical perspective on the milestones in model based design optimization techniques is presented along with an overview of the state of the art mathematical tools to solve the resulting complex problems Chapters 2 and 3 discuss two fundamental concepts that are essential for the reader These concepts are i mixed integer dynamic optimization problems and two algorithms to solve this class of optimization problems and ii developing a model based multiparametric programming model predictive control These tools are used to systematically evaluate the tradeoffs between different time scale decisions based on a single high fidelity model as demonstrated on i design and control ii scheduling and control and iii design scheduling and control problems We present illustrative examples on chemical processing units including continuous stirred tank reactors distillation columns and combined heat and power regeneration units along with discussions of other relevant work in the literature for each class of problems **Guide to Multicultural Resources** ,1997 Technology Entrepreneurship and Sustainable Development Pradeep Ray,Rajib Shaw,2022-06-16 This book discusses the need for entrepreneurship for sustainable development from the perspective of Asia the fastest growing region in the world The world is now witnessing a spectacular rise of technology entrepreneurship involving mobile phones artificial intelligence geospatial information systems and social media On the other hand governments all over the world particularly those in low and medium income countries are facing severe resource constraints in developing the livelihood and well being of citizens Although many non government organizations NGOs have worked on various development projects in a number of social sectors such as health education disabilities poverty alleviation and environment there is still substantial scope for technological innovation including more efficient effective and user friendly solutions in different parts of the world This book is organized into 2 parts and consists of 17 chapters The first part explores education and well being and the second part discusses the climate environment and disaster management CMA
