Remote Instrumentation and Virtual Laboratories Franco Davoli, Norbert Meyer, Roberto Pugliese, Sandro Zappatore, 2010-03-10 Accessing remote instrumentation worldwide is one of the goals of e Science The task of enabling the execution of complex experiments that involve the use of distributed scientific instruments must be supported by a number of different architectural domains which inter work in a coordinated fashion to provide the necessary functionality These domains embrace the physical instruments the communication network interconnecting the distributed systems the service oriented abstractions and their middleware The Grid paradigm or more generally the Service Oriented Architecture SOA viewed as a tool for the integration of distributed resources plays a significant role not only to manage computational aspects but increasingly as an aggregator of measurement instrumentation and pervasive large scale data acquisition platforms In this context the functionality of a SOA allows managing maintaining and exploiting heterogeneous instrumentation and acquisition devices in a unified way by providing standardized interfaces and common working environments to their users but the peculiar aspects of dealing with real instruments of widely different categories may add new functional requirements to this scenario On the other hand the growing transport capacity of core and access networks allows data transfer at unprecedented speed but new challenges arise from wireless access wireless sensor networks and the traversal of heterogeneous network domains The book focuses on all aspects related to the effective exploitation of remote instrumentation and to the building complex virtual laboratories on top of real devices and infrastructures These include SOA and related middleware high speed networking in support of Grid applications wireless Grids for acquisition devices and sensor networks Quality of Service QoS provisioning for real time control measurement instrumentation and methodology as well as metrology issues in distributed systems Let's Get IoT-fied! Anudeep Juluru, Shriram K. Vasudevan, T.S. Muruges, 2022-09-27 Internet of Things IoT stands acclaimed as a widespread area of research and has definitely enticed the interests of almost the entire globe IoT appears to be the present as well as the future technology This book attempts to inspire readers to explore and become accustomed to IoT Presented in a lucid and eloquent way this book adopts a clear and crisp approach to impart the basics as expeditiously as possible It kicks off with the very fundamentals and then seamlessly advances in such a way that the step by step unique approach connection layout and the verified codes provided for every project can enhance the intuitive learning process and will get you onboard to the world of product building We can assure that you will be definitely raring to start developing your own IoT solutions and to get yourself completely lost in the charm of IoT Let s start connecting the unconnected It s time to get IoT fied *PIC Microcontroller Projects in C* Dogan Ibrahim, 2014-04-08 Extensively revised and updated to encompass the latest developments in the PIC 18FXXX series this book demonstrates how to develop a range of microcontroller applications through a project based approach After giving an introduction to programming in C using the popular mikroC Pro for PIC and MPLAB XC8 languages this book describes the

project development cycle in full The book walks you through fully tried and tested hands on projects including many new advanced topics such as Ethernet programming digital signal processing and RFid technology This book is ideal for engineers technicians hobbyists and students who have knowledge of the basic principles of PIC microcontrollers and want to develop more advanced applications using the PIC18F series This book Includes over fifty projects which are divided into three categories Basic Intermediate and Advanced New projects in this edition Logic probe Custom LCD font design Hi Lo game Generating various waveforms in real time Ultrasonic height measurement Frequency counter Reaction timer GPS projects Closed loop ON OFF temperature control Bluetooth projects master and slave RFid projects Clock using Real time clock RTC chip RTC alarm project Graphics LCD GLCD projects Barometer thermometer altimeter project Plotting temperature on GLCDEthernet web browser based control Ethernet UDP based control Digital signal processing Low Pass Filter design Automotive LIN bus project Automotive CAN bus project Multitasking projects using both cooperative and Round robin scheduling Unipolar stepper motor projects Bipolar stepper motor projects Closed loop ON OFF DC motor control A clear introduction to the PIC 18FXXX microcontroller s architecture Covers developing wireless and sensor network applications SD card projects and multi tasking all demonstrated with the block and circuit diagram program description in PDL program listing and program description Includes more than 50 basic intermediate and advanced projects
