The untold story of a national trauma NASA's Challenger explosion and what really happened to America's Teacher in Space illuminating the tragic cost of humanity setting its sight on the stars. You've seen the pictures. You know what happened. Or do you? On January 28 1986 NASA's space shuttle Challenger exploded after blasting off from Cape Canaveral. Christa McAuliffe America's Teacher in Space was instantly killed along with the other six members of the mission. At least that's what most of us remember. Kevin Cook tells us what really happened on that ill-fated unforgettable day. He traces the pressures leading from NASA to the White House that triggered the fatal order to launch on an ice-cold Florida morning. Cook takes readers inside the shuttle for the agonizing minutes after the explosion which the astronauts did indeed survive. He uncovers the errors and corner-cutting that led an overconfident space agency to launch a crew that had no chance to escape. But this is more than a corrective to a now dimming memory. Centering on McAuliffe a charmingly down-to-earth civilian on the cusp of history. *The Burning Blue* animates a colorful cast of characters: a pair of red-hot flyers at the shuttle's controls the second female and first Jewish astronaut the second Black astronaut and the first Asian American and Buddhist in space. Drawing vivid portraits of Christa and the astronauts Cook makes readers forget the fate they're hurtling toward. With drama immediacy and shocking surprises he reveals the human price the Challenger crew and America paid for politics capital P Progress and the national dream of reaching for the stars.

*Beyond Intellect and Reasoning* Acres A Stowe, 2022-03-31. The purpose of this book is to draw readers attention to various legal intricacies associated with deploying self directed artificial intelligence systems. AIS particularly emphasizing the limits of the law vis vis liability problems that may emerge within third party contracts. With the advent of today's ostensive Amazon Halo or Alexa consumers are having to conclude contracts e.g. sale of goods and distant financial services in much more complex cybernetic environments. Generally with one party acting in the capacity of a human being while the other as an autonomous thing device AIS with capabilities well beyond that of humans representing the interests of others not just other humans. Yet traditional jurisprudence is limited in scope for holding these systems legally accountable if they were to malfunction and cause harm. Interestingly within the judicial system itself the use of AIS is more prevalent now including within the criminal justice system in some jurisdictions. In the United States for instance AIS algorithms are utilized to determine sentencing and bail processing. Still jurists find themselves limited to traditional legal methodologies and tools when tackling novel situations brought about by these systems. For example traditional strict liability concept as applied in tort law typically ties responsibility to the person s.e.g. AIS developers influencing the decision making process. In contract law particularly where third parties are concerned AIS are equated to tools for the purposes of traditional strict liability rules. Thus binding anyone on whose behalf they would have acted irrespective of whether such acts were intentional or foreseeable.
