ABSTRACT: -

The research was carried out for a live (G+5) structure. SAP2000 finite component software was used to analyze the building. Due to high land prices and a scarcity of land, multi-story structures are widespread in India. Seismic is a marvel that has the power to ruin huge constructions. Structures should be designed from the bottom up to be safe for people's lives, with the appropriate style and features, in order to have a flexible and reasonable disappointment. The primary purpose is to construct a tremor-resistant structure by performing a business seismic investigation, establishing the look with a static comparable research strategy, and analysing and planning the structure using SAP2000. As a result, all zones (II, III, IV, and V) were calculated by checking the structure's reaction and behaviour using its base shear, structural deformation, and performance curve.

Keywords: - Seismic Analysis, Story Drift, Story Displacement, Performance Curve, Structure Deformation, Base Shear.

INTRODUCTION: -

The bulk of structures are vulnerable to lateral stresses, especially seismic loads, which are dynamic and highly unpredictable. Many seismically sensitive constructions have collapsed or been severely damaged in prior earthquakes. Future earthquakes are unavoidable since 60 percent of India's geographical area is subject to seismic hazards. Construction quality control and safe design practises can help to prevent property and life loss. Because of the earthquake's consequences and structural damage, earthquake analysis and design concepts were developed. The following are the four types of earthquake analysis methods: Seismic coefficient method (Equivalent linear static analysis)

1. Pushover method (Non-linear static analysis) .
2. Response spectrum technique (Linear dynamic analysis).
3. Time history analysis (Non-linear dynamic analysis).

When there is a significant earthquake, the seismic elasticity methodology, also known as linear static analysis, does not yield reliable findings. Nonlinear analysis is necessary to capture the behaviour of structures during moderate to severe earthquakes. Nonlinear dynamic analysis necessitates site-specific ground motion research (Time history analysis). The pushover analysis approach may be used to evaluate the seismic or lateral stresses and deformation

Handbook of Research on Seismic Assessment and Rehabilitation of Historic Structures Asteris, Panagiotis G., Plevris, Vagelis, 2015-07-13 Rehabilitation of heritage monuments provides sustainable development and cultural significance to a region The most sensitive aspect of the refurbishment of existing buildings lies in the renovation and recovery of structural integrity and public safety The Handbook of Research on Seismic Assessment and Rehabilitation of Historic Structures evaluates developing contributions in the field of earthquake engineering with regards to the analysis and treatment of structural damage inflicted by seismic activity This book is a vital reference source for professionals researchers students and engineers active in the field of earthquake engineering who are interested in the emergent developments and research available in the preservation and rehabilitation of heritage buildings following seismic activity **Structural Analysis of Historical Constructions: Anamnesis, Diagnosis, Therapy, Controls** Koen Van Balen, Els Verstrynge, 2016-11-03 Structural Analysis of Historical Constructions Anamnesis diagnosis therapy controls contains the papers presented at the 10th International Conference on Structural Analysis of Historical Constructions SAHC2016 Leuven Belgium 13 15 September 2016 The main theme of the book is Anamnesis Diagnosis Therapy Controls which emphasizes the importance of all steps of a restoration process in order to obtain a thorough understanding of the structural behaviour of built cultural heritage The contributions cover every aspect of the structural analysis of historical constructions such as material characterization structural modelling static and dynamic monitoring non destructive techniques for on site investigation seismic behaviour rehabilitation traditional and innovative repair techniques and case studies A special focus has been put on six specific themes Innovation and heritage Preventive conservation Computational strategies for heritage structures Sustainable strengthening of masonry with composites Values and sustainability and Subsoil interaction The knowledge insights and ideas in Structural Analysis of Historical Constructions Anamnesis diagnosis therapy controls make this book of abstracts and the corresponding digital full colour conference proceedings containing the full papers must have literature for researchers and practitioners involved in the structural analysis of historical constructions *Advances in Structural Engineering* Vasant Matsagar, 2014-12-12 The book presents research papers presented by academicians researchers and practicing structural engineers from India and abroad in the recently held Structural Engineering Convention SEC 2014 at Indian Institute of Technology Delhi during 22 24 December 2014 The book is divided into three volumes and encompasses multidisciplinary areas within structural engineering such as earthquake engineering and structural dynamics structural mechanics finite element methods structural vibration control advanced cementitious and composite materials bridge engineering and soil structure interaction *Advances in Structural Engineering* is a useful reference material for structural engineering fraternity including undergraduate and postgraduate students academicians researchers and practicing engineers **Protection of Built Environment Against Earthquakes** Matjaž

Dolšek, 2011-08-16 Current knowledge and state of the art developments in topics related to the seismic performance and risk assessment of different types of structures and building stock are addressed in the book with emphasis on probabilistic methods. The first part addresses the global risk components as well as seismic hazard and ground motions, whereas the second, more extensive part, presents recent advances in methods and tools for the seismic performance and risk assessment of structures. The book contains examples of steel masonry and reinforced concrete buildings as well as some examples related to various types of infrastructure such as bridges and concrete gravity dams. The book's aim is to make a contribution towards the mitigation of seismic risk by presenting advanced methods and tools which can be used to achieve well-informed decision making, this being the key element for the future protection of the built environment against earthquakes. Audience: This book will be of interest to researchers, postgraduate students and practicing engineers working in the fields of natural hazards, earthquake structural and geotechnical engineering and computational mechanics, but it may also be attractive to other experts working in the fields related to the social and economic impact of earthquakes.
