*Prepared by Dr. Lucy Hallie on behalf of Wellesley Animal Hospital*

## HOUSING

### Substrate:

- We recommend using paper towel, newspaper or repti-carpet to line the bottom of the cage
- Avoid sand, gravel, or small particle materials as your ball python may ingest these and this can lead to constipation.

### Cages:

- A single adult ball python requires a minimum 30-gallon aquarium, larger if possible.
- Ideally the cage should be as long as the snake.
- Ball pythons are solitary animals and should be kept separately
- Snakes are good at escaping so be sure to have a mesh screen that can be secured on top of the aquarium

### Heating:

- Always ensure there is a thermal gradient in the cage i.e. there is a hot and cold side
- Temperatures:

Hot side: 85-90F      Cold side: 75F

- Ideally have a separate thermometer in each of these areas.
- Avoid hot rocks as these can burn your ball python

### Humidity:

- Ideal humidity is 60-70% for your snake. This can be hard to establish in an enclosure and having a humid hide may be a good alternative to help with shedding and hydration. Snakes should always shed in one piece. If your snake is shedding in multiple pieces, please contact your veterinarian for advice.
- These can be bought or easily created with an appropriate size plastic container such as a yoghurt container or Tupperware box. Cut a small hole in the container just big enough for your snake to get in and out. Place sphagnum moss or paper towel in the bottom and keep this damp. Your snake will go in and out as they please.

### Hiding Area:

- Provide dark hiding areas for your snake to hide such as a wooden hut or commercially available hide
- Provide at least one hiding area in the hot side and one on the cold side.

## DIET

### Food

- Feed juveniles once a week and adults every 2 weeks
- An appropriate sized prey item should be no larger than the widest part of your snake
- Only feed stunned or pre-killed (frozen/thawed) prey. Live prey can cause severe injuries to your snake and is not recommended.
- Always feed whole prey items
- Snakes tend to not eat while they are shedding
- We recommend feeding your ball python in the late afternoon/evening, being a nocturnal snake they are sometimes uncomfortable being fed during the day

### Why They Are Popular Among Reptile Enthusiasts

Ball Pythons are widely regarded as one of the most popular pet snakes in the world and their popularity stems from several key factors

- 1 Manageable Size Unlike larger python species that can exceed 10 20 feet in length Ball Pythons are modest in size Adults average between 3 to 5 feet with females being larger than males This makes them much easier to house handle and care for in a domestic setting
- 2 Gentle Temperament Their calm and shy nature makes them suitable even for beginners Ball Pythons rarely display aggression and their primary defense mechanism curling into a ball is a clear sign of stress rather than hostility This non threatening behavior gives keepers confidence when learning how to handle snakes
- 3 Longevity With proper care Ball Pythons can live for 20 30 years in captivity offering long term companionship and making them a rewarding commitment for reptile keepers
- 4 Wide Variety of Morphs Selective breeding has produced hundreds of morphs genetic variations that affect the snake s coloration and pattern From albino and piebald to more complex morphs with intricate patterns this variety makes them highly appealing to hobbyists interested in collecting or breeding unique snakes
- 5 Low Maintenance Compared to other exotic pets Ball Pythons require relatively straightforward care secure enclosures correct heating and humidity and appropriate feeding schedules Once their needs are met they are hardy and adaptable Because of these traits Ball Pythons are often recommended as an introductory species for those new to reptile keeping while still offering enough variety and interest to keep advanced hobbyists engaged
