Error Estimates for Well-Balanced Schemes on Simple Balance Laws Debora Amadori, Laurent Gosse, 2015-10-23

This monograph presents in an attractive and self contained form techniques based on the L^1 stability theory derived at the end of the 1990s by A Bressan T P Liu and T Yang that yield original error estimates for so called well balanced numerical schemes solving 1D hyperbolic systems of balance laws Rigorous error estimates are presented for both scalar balance laws and a position dependent relaxation system in inertial approximation Such estimates shed light on why those algorithms based on source terms handled like local scatterers can outperform other more standard numerical schemes Two dimensional Riemann problems for the linear wave equation are also solved with discussion of the issues raised relating to the treatment of 2D balance laws All of the material provided in this book is highly relevant for the understanding of well balanced schemes and will contribute to future improvements

Algebraic Structures and Moduli Spaces Jacques Hurtubise and Eyal Markman, This book contains recent and exciting developments on the structure of moduli spaces with an emphasis on the algebraic structures that underlie this structure Topics covered include Hilbert schemes of points moduli of instantons coherent sheaves and their derived categories moduli of flat connections Hodge structures and the topology of affine varieties Two beautiful series of lectures are a particularly fine feature of the book One is an introductory series by Manfred Lehn on the topology and geometry of Hilbert schemes of points on surfaces and the other by Hiraku Nakajima and Kota Yoshioka explains their recent work on the moduli space of instantons over \mathbb{R}^4 The material is suitable for graduate students and researchers interested in moduli spaces in algebraic geometry topology and mathematical physics
