

# The Doppler Effect

**Generalized Doppler Equation in 2-D:** the observed frequency  $f$  is related to the emitted frequency of the source  $f_0$  by the equation

$$f = \left( \frac{v + v_r}{v + v_s} \right) f_0$$

where  $v$  is the velocity of waves in the medium,  
 $v_r$  is the velocity of the source relative to the medium and  
 $v_s$  is the velocity of the receiver relative to the medium

In the case of a stationary observer (or microphone), the equation reduces to

$$f = \left( \frac{v}{v + v_s} \right) f_0$$

where  $v_s$  is positive if the source is moving away from the observer, and negative when moving towards the observer

These equations assume that the source is directly approaching or receding from the observer.
