## Rubric 2.4 — Step 2: Teach and Assess (educational technology)

**Essential Question:** How does the candidate incorporate educational technology (digital/virtual tools and resources) to provide opportunities for students to achieve and/or demonstrate the content-specific learning goal(s)?

Level 1	Level 2	Level 3	Level 4	Level 5
<p>Candidate does not provide opportunities for students to use or access educational technology to learn or demonstrate the content-specific learning goal(s).</p>	<p>Candidate uses educational technology to present information in a one-to-many learning environment for a drill or practice type activity to achieve and/or demonstrate the content-specific learning goal(s).</p>	<p>Candidate provides students with opportunities to use educational technology to achieve and/or demonstrate the content-specific learning goal(s).</p>	<p>All of Level 3, plus: Candidate provides students choice of a selected range of educational technology to use to achieve and/or demonstrate content-specific learning goal(s). ### **Educational Recovery for PK-12**

**Education During and After a Pandemic** Keough, Penelope D., 2021-06-25. The impact of the COVID-19 pandemic on PK-12 education has halted traditional education but has also fostered innovation in distance learning, parental involvement in their children's education, and families coping mechanisms when forced to self-quarantine. The educational community is thirsting for strategies, methods, and tools to help with prevention of gaps in the education of youth during this pandemic and in preparation of future global crises. *Educational Recovery for PK-12: Education During and After a Pandemic* builds awareness of the needs prevalent to the education of PK-12 students effectively during and after the COVID-19 pandemic and provides tools and strategies to assist these students as they grapple with new teaching and learning styles. This book provides timely information to support new modes of teaching and learning during this unprecedented time and fosters traditional methods of education while concurrently respecting guidelines set by the CDC to keep students safe and eliminate gaps in learning. It also benefits the educational community by leading the field in innovative steps to effectively educate PK-12 students so they will continue to be contributing members of society, albeit surviving the most devastating epidemic in the last 100 years. Focusing on a wide range of topics such as student mental health, learning gaps, and best teaching practices, this book is ideal for teachers, administrators, district superintendents, counselors, psychologists, social workers, parents, academicians, researchers, and students.

**Overtested** Jessica Zacher-Pandya, 2015-04-24. This timely book explores what is often overlooked in policy debates about the education of English language learners: how the day-to-day dynamics of the classroom are affected by high-stakes testing and the pressures students and teachers experience and internalize as a result. The author presents and analyzes classroom observations, student work, and test scores as well as interviews with students and teachers. A disturbing picture of today's overtested public school classroom emerges from the events and practices described in this book. While hard to believe, all the depictions presented took place in a real elementary school classroom and reflect the current culture of extreme accountability. *Overtested* not only describes the flaws in our current accountability system but it also provides real-world solutions that can have an immediate and positive effect at the classroom, state, and national level. Chapters address key debates such as how to measure proficiency, the validity of various language assessment tools, the overuse of assessment, and the risks and benefits of teaching language arts to English language learners via mandated structured curricula. Jessica Zacher-Pandya is an Associate Professor in the Departments of Teacher Education and Liberal Studies at California State University Long Beach. This book tells an important tale that cannot be conveyed by numbers and tables. It is important information for teachers, for those who employ and train teachers, and for those who create the policies under which teachers are required to operate. Foreword by Robert Rueda, University of Southern California, author of *The 3 Dimensions of Improving Student Performance: Finding the Right Solutions to the Right*

Problems How many more dire tales of schooling for assessment must be told before we realize that teaching and testing are not the same and that scores on standardized multiple choice achievement tests are a sorry substitute for an engaging learning environment In this book Jessica Zacher Pandya reaches across ideological and institutional borders to offer reasonable pragmatic solutions for change Linda Valli Jeffrey David Mullan Professor of Teacher Education Professional Development College of Education University of Maryland Zacher Pandya s invaluable book exposes the injustices and absurdities of our high stakes accountability era Just as importantly it limns a more academically robust and culturally relevant instructional vision for English language learners Gerald Campano University of Pennsylvania

tasks     *The Effect of Biobased Comonomers (Isosorbide and 2,5-furan Dicarboxylic Acid) on Alkaline Hydrolysis of Co-polyesters, PEI<sub>x</sub>T and PET<sub>Fy</sub>* Ananya Das, 2021

Two bio based comonomers isosorbide ISB and 2,5 Furan dicarboxylic acid FDCA was used to partially or completely replace the diol Ethylene glycol EG or diacid Terephthalic acid TPA of petroleum based polyester Polyethylene terephthalate PET. The effect of the co monomers on the alkaline hydrolysis reaction of bio based co polyesters PEI<sub>x</sub>T and PET<sub>Fy</sub> or polyester Polyethylene furanoate PEF was investigated to compare the rate of depolymerization for their reaction kinetics and the factors contributing to the reaction mechanism were studied. Different compositions of ISB 3%, 8% and 12% was used to replace the EG in PET to produce the PEI<sub>x</sub>T co polyesters and different composition of FDCA 10% and 100% was used to replace the TPA to produce the PET<sub>Fy</sub> co polyesters. The 100% replacement of TPA with FDCA produced the furan analogous of PET PEF. The alkaline hydrolysis reaction kinetics were studied at temperatures between 130°C to 150°C in 1 M Sodium Hydroxide NaOH solution in a glass reactor system and a Parr reactor system. The comonomers exhibited increase in the reaction rates under alkaline hydrolysis relative to the pure PET for all systems. Since alkaline hydrolysis occurs in the amorphous region near the surface of the polymers, the crystallinity, surface wetting and water uptake properties of the polymers have an impact on the hydrolysis reaction kinetics. To understand the cause for the improved reaction kinetics with inclusion of the co monomers, the impact of comonomers on the physical properties such as crystallinity, surface wetting and water uptake were studied. The reactive bonds of the co monomers can have a significant impact on the ester linkage in the co polyesters that make them susceptible to hydrolytic degradation. Literature on the hydrolytic degradation in the environment suggests that the ester linkage of isosorbide with TPA might be more susceptible to hydrolysis than the linkage of EG with TPA, which could be a factor in facilitating the hydrolysis reaction at lower temperatures. Similarly, the FDCA-EG linkage could be more reactive under hydrolysis than the EG-TPA bond. To compare the reactivity of the ester linkage of the oxygen based furan rings of FDCA to the aromatic benzene ring of TPA, the reaction kinetics of small molecule analogues Bis(2-hydroxyethyl) terephthalate BHET for PET and Bis(2-hydroxyethyl) 2,5-furandicarboxylate BHEF for PEF were compared. To determine the reaction rate constants of the PEI<sub>x</sub>T co polyesters, the conversion rates at 130 °C were fit into an established first order kinetic model. Because of the higher reaction rates of the PET<sub>F10</sub> and PEF at the experimental temperatures studied (130 °C to 150 °C), the kinetics of the samples could not be captured. Fourier Transform Infrared Spectroscopy (FTIR) was used to analyze the precipitate following filtration of the co polymers from product of the alkaline hydrolysis reactions. FTIR data confirmed the presence of functional groups consistent with monomers present in the co polyesters. Qualitatively, Proton <sup>1</sup>H and Carbon <sup>13</sup>C Nuclear Magnetic Resonance (NMR) was also performed on the co polyester samples to quantify the monomers present in the samples. A recovery method for the co monomers TPA and FDCA based on selective solubility of TPA and FDCA in water and dimethyl sulfoxide (DMSO) co solvent system was investigated. The solubility of TPA and FDCA in water is limited but in DMSO TPA has a 19 wt% solubility and

FDCA has a 55 wt% solubility at room temperature Preliminary work demonstrated that using the difference in their solubility in the DMSO solvent TPA can be selectively precipitated from the TPA FDCA mixture in DMSO using water as an anti solvent however further studied need to be done for the recovery of FDCA from the FDCA DMSO solution Since isosorbide is readily soluble in water the isosorbide following the alkaline hydrolysis of PEI<sub>x</sub>T co polyesters were expected to be washed off with water in the EG water residue during washing of the recovered product Literature suggests a distillation and cold crystallization method can be used as an energy optimized isosorbide recovery method from a EG water solution Bio based co polyesters exhibited higher reaction rates compared to PET while PEF exhibited the highest reaction rate at all temperatures The impact of the co polyesters on crystallinity surface wetting water uptake and the bond reactivity could be facilitating the higher reaction rates TPA following the alkaline hydrolysis of PET<sub>Fy</sub> can be recovered using the selective solubility of TPA and FDCA in a co solvent of DMSO and water ISB can be recovered from the residue solution of EG and water using a distillation and cold crystallization method
