of essays books and movies that approach the question of AI few have asked how exactly scientists and philosophers have codified human thought and behavior Rather than focusing on technical contributions in machine building *The Descent of Artificial Intelligence* explores a more diverse cast of thinkers who helped to imagine the very kind of human being that might be challenged by a machine Kevin Padraic Donnelly argues that what we often think of as the goal of AI has in fact been shaped by forgotten and discredited theories about people and human nature as much as it has been by scientific discoveries mathematical advances and novel technologies By looking at the development of artificial intelligence through the lens of social thought Donnelly deflates the image of artificial intelligence as a technological monolith and reminds readers that we can control the narratives about ourselves
