Research in Collegiate Mathematics Education VII Fernando Hitt, Derek Allan Holton, Patrick W. Thompson, 2010-03-05 The present volume of Research in Collegiate Mathematics Education like previous volumes in this series reflects the importance of research in mathematics education at the collegiate level The editors in this series encourage communication between mathematicians and mathematics educators and as pointed out by the International Commission of Mathematics Instruction ICMI much more work is needed in concert with these two groups Indeed editors of RCME are aware of this need and the articles published in this series are in line with that goal Nine papers constitute this volume The first two examine problems students experience when converting a representation from one particular system of representations to another The next three papers investigate students learning about proofs In the next two papers the focus is instructor knowledge for teaching calculus The final two papers in the volume address the nature of conception in mathematics Whether they are specialists in education or mathematicians

Cottonseed Products

Leebert Lloyd Lamborn, 1904 A thorough overview with illustrations of the cottonseed byproduct industry emerging at the time of publication The cottonseed industry stood at the center of what would become several storms over food adulteration substitute products and the industrialization of food in general Excerpt but there are independent manufacturers of oleomargarine located near the packing centres who prefer to buy the fat as it is taken from the animal and work it into neutral by their own process In the packing plants the leaf fat is taken from the animal immediately after killing hung on mounted racks and wheeled into refrigerators to remove as quickly as possible all animal heat It is next chopped finely or reduced to pulp by machinery and melted in jacketed kettles exactly similar to those used for oleo oil When the melting process is complete it is allowed to settle the precipitation of the fibre being accelerated by the addition of salt as in the case of oleo oil After the settling process the clear oil is siphoned to a receiving tank and what is not used in oleomargarine is tierced for shipment A good quality of leaf fat will produce by careful handling about 90 per cent of its weight in neutral and each animal will yield an average of eight or nine pounds Comparatively little neutral is made from back fat The amount used however depends much on the relative demand for neutral and ordinary lard products as it is sometimes more advantageous to work fats into one form than another The oil made from back fat retains more of the flavor peculiar to lard and like the lower grades of oleo oil is less free from stearin or other undesirable constituents Some packing houses mix a small per cent of back fat with the leaf in making their highest grade of neutral and oleomargarine manufacturers sometimes use both grades of the finished oil in combination The difference in price between the two is usually slight and neutral made exclusively from leaf is generally sought Antiquarian bookseller s description 2017
