Q1) What is the minimum time required to complete both tasks above?

Q2) What is the minimum time required to complete the tasks above?

Q3) What is the minimum time required to do the above tasks?

Q4) How much 'float time' is there to do Task E?

Critical Path Analysis

Explaining the NODE:

Left-Hand side – Activity Number (does not have to be chronological)

Top-Right – Earliest Start Time for the next activity

Bottom-Right – The Latest Start Time without it causing a delay

Example A:

Q1) From the above example, what sequence represents the Critical Path?

a) Critical Path = A – B – C – E

b) Critical Path = A – B – D – E

Example B:

TASK 2: Fill in the empty quadrants above.

Q1) In the above example, which sequence represents the Critical Path?

Percolation Theory for Flow in Porous Media Allen Hunt,Robert Ewing,Behzad Ghanbarian,2014-02-04 This monograph presents for the first time a unified and comprehensive introduction to some of the basic transport properties of porous media such as electrical and hydraulic conductivity air permeability and diffusion The approach is based on critical path analysis and the scaling of transport

properties which are individually described as functions of saturation At the same time the book supplies a tutorial on percolation theory for hydrologists providing them with the tools for solving actual problems In turn a separate chapter serves to introduce physicists to some of the language and complications of groundwater hydrology necessary for successful modeling The end of chapter problems often indicate open questions which young researchers entering the field can readily start working on This significantly revised and expanded third edition includes in particular two new chapters one on advanced fractal based models and one devoted to the discussion of various open issues such as the role of diffusion vs advection preferential flow vs critical path universal vs non universal exponents for conduction and last but not least the overall influence of the experimental apparatus in data collection and theory validation The book is suitable for advanced graduate courses with selected problems and questions appearing at the end of each chapter I think the book is an important work that will guide soil scientists hydrologists and physicists to gain a better qualitative and quantitative understanding of multitransport properties of soils Marcel G Schaap Soil Science Society of America Journal May June 2006
