

Genetics Lecture 1

We will begin this course with the question: What is a gene?

This question will take us four lectures to answer because there are actually several different definitions that are appropriate in different contexts.

We will start with a physical definition of the gene. Conceptually this is the simplest and it will give me an excuse to briefly review some of the molecular biology that you probably already know.

Genes are made of DNA

For this course we will mostly think of DNA as an information molecule not as a chemical substance.

In 1953, Watson and Crick deduced that the structure of DNA was a double helix. It was not the helical structure per se, but the discovery of complementary base pairing that revealed how information could be encoded in a molecule and how this information could be exactly duplicated each cell division. **Replication**.

In order to extract information from the DNA, the cell again uses the complementary base-pairing to make a copy of the information copied onto an RNA molecule. This is known as **Transcription**. RNA is chemically less stable than DNA and mRNA can be thought of as a temporary copy of DNA's information.

Reproductive Genetics, Gender and the Body Elizabeth Ettorre, 2013-04-15 This book is all about reproductive genetics a sociological concept developed to define the use of DNA based technologies in the medical management and supervision of reproduction and pregnant women In a searching analysis Elizabeth Ettorre uncovers the hidden social processes involved in the development of these technologies Focussing on prenatal screening she explores how the key concepts of gender and the body are intertwined with the process of building genetic knowledge and some of the unintended consequences for women These include the injection of biology into social relationships and the development of a gendered discourse of shame and stigmatisation in which the perfect body becomes idealised and new conceptions of disability are shaped It becomes clear that the modernist tradition of scientific disinterestedness is being replaced by a new ethic the making of moral judgements by scientists Reproductive Genetics Gender and the Body draws on interviews with European medical legal and nursing professionals and raises important issues around the gendered female body the site of genetic capital It challenges professional and scholar alike to grapple with and think through their responsibilities in this complex field where the competing issues have yet to be resolved Biology: How Life Works, Volume 1 James Morris, Daniel
