

**Q.3 Describe the importance of Physics in our daily life.**

**Ans:** **Positive Aspects:**

- 1) Electricity is used not only to get light and heat but also mechanical energy that drives fans and electric motors etc. This is possible due to knowledge of physics.
- 2) The means of transportation such as car and airplanes; domestic appliances such as air conditioners, refrigerators, washing machines and microwave ovens etc. are the gifts of knowledge of physics.
- 3) The mean of communication such as radio, T.V, telephone and computer are the result of applications of physics.
- 4) A mobile phone allows us to contact people anywhere in the world and to get latest worldwide information. We can take and save pictures, sent and receive messages of our friends. We can also receive radio transmission and can use it as a calculator as well. All this is possible due to knowledge of physics.

**Negative Aspects:**

The scientific inventions have also caused harms and destruction of serious nature. One of which is the environmental pollution and the other is the deadly weapons.

**Q.4 Define physical quantities. Also describe its types.**

**Ans:** **Physical quantities:**

All measurable quantities are called physical quantities. A physical quantity possesses at least two characteristics in common. One is its numerical magnitude and the other is the unit in which it is measured.

Physical quantities are divided into two types:

**Base quantities:** The quantities on the basis of which other quantities are expressed are known as base quantities. For example length, mass, time, electric current, temperature, intensity of light and amount of substance.

**Derived quantities:** The quantities that are expressed in terms of base quantities are called derived quantities. For example area, volume, speed, force, work etc.

**Q.5 What is international system of units? Briefly discuss.**

**Ans:** There is a need of some standard quantities for measuring/comparing unknown quantities. Once a standard is set for a quantity then it can be expressed in terms of that standard quantity. This standard quantity is called a unit.

With the development in the field of science and technology, the need for a commonly acceptable system of units was seriously felt all over the world particularly to exchange scientific and technical information. The eleventh General conference on weight and Measures held in the Paris in 1960 adopted a world-wide system of measurement called international systems of units commonly referred as SI.
