Kimble, Rattan Lal, Richard Birdsey, Linda S. Heath, 2002-09-25 Much attention has been given to above ground biomass and its potential as a carbon sink but in a mature forest ecosystem 40 to 60 percent of the stored carbon is below ground As increasing numbers of forests are managed in a wide diversity of climates and soils the importance of forest soils as a potential carbon sink grows The Potenti *The Wiley Blackwell Companion to Religion and Ecology* John Hart, 2017-03-24 In the face of the current environmental crisis which clearly has moral and spiritual

dimensions members of all the world's faiths have come to recognize the critical importance of religion's relationship to ecology. The Wiley Blackwell Companion to Religion and Ecology offers a comprehensive overview of the history and the latest developments in religious engagement with environmental issues throughout the world. Newly commissioned essays from noted scholars of diverse faiths and scientific traditions present the most cutting edge thinking on religion's relationship to the environment. Initial readings explore the ways traditional concepts of nature in Christianity, Judaism, Islam, Buddhism and other religious traditions have been shaped by the environmental crisis. Readings then address the changing nature of theology and religious thought in response to the challenges of protecting the environment. Various conceptual issues and themes that transcend individual traditions, climate change, bioethics, social justice, ecofeminism and more are then analyzed before a final section examines some of the immediate challenges we face in caring for the Earth while looking to the future of religious environmentalism. Timely and thought provoking, Companion to Religion and Ecology offers illuminating insights into the role of religion in the ongoing struggle to secure the future well being of our natural world. With a foreword by Ecumenical Patriarch Bartholomew I and an Afterword by John Cobb. **Coastal Lagoons in Europe** Geoffrey D.

Gooch, 2015-07-15. Lagoons represent nearly 13% of the shoreline globally and around 5% in Europe. Coastal lagoons are shallow water bodies separated from the ocean by a barrier, e.g. narrow spit connected at least intermittently to the ocean by one or more restricted inlets and usually geographically oriented parallel to the shore line. Coastal lagoons are flexible and usually able to cope with environmental change yet nowadays they are under threat. This is partly due to climate change impacts, for example sea level rise and hydro meteorological extreme events but also due to more direct human activities and pressures. The book focuses on addressing these challenges through integrated management strategies seen in a land sea and science stakeholder policy perspective. Pan-European management challenges are seen from the context of the perspectives of Policy, Environment and Modelling. Four case study lagoons in different geographical locations in Europe provide examples of some of the practical experiences and results around these challenges. Possible impacts on drainage basins and lagoons are introduced through integrated scenarios which were developed through a multi science and land lagoon science perspective combined with interactions and contributions from stakeholders and citizens. Issues around climate change impacts on environmental conditions in both drainage basins and lagoons are also included. The book derives from a collaborative EC funded project entitled Integrated Water Resources and Coastal Zone Management in European Lagoons in the Context of Climate Change comprising nine partner institutes with a wide diversity in the scientific disciplines covered.
