

Supplemental Problems for Chapters 2-5: Solutions

1. If I purchase a new car for \$8,000, pay \$100 today, make 35 monthly payments of \$150 (beginning one month from today) and a final payment at the end of the 36th month, what is the amount of the final payment? The stated interest rate is 18% compounded monthly.

$$\$150 \left[\frac{1}{0.015} - \frac{1}{0.015(1.015)^{35}} \right] + \left[\frac{\$X}{(1.015)^{36}} \right] = \$7,900$$

Solving yields $\$X = \$6,560.81$

2. Determine the length of time required to double the value of an investment, given the following nominal rates of return: (a) 4%, (b) 10%, (c) 30%, and (d) 100%.

(a) $(1.04)^t = 2$; $\ln(1.04)t = \ln(2)$; $t = 17.67$

(b) $t = 7.27$

(c) $t = 2.64$

(d) $t = 1.0$

3. Which of the following investments produces the highest annual percentage return?

a. Purchase a security today for \$100 and sell it in three years for \$119.10.

b. Purchase a security today for \$50 and sell it in one year for \$55.

c. Purchase a security today for \$200 and sell it in two years for \$237.62.

d. Purchase a security today for \$150 and sell it in ten years for \$300.

(a) $100(1+r)^3 = 119.10$; $(1+r)^3 = 1.191$; $r = 6\%$

(b) 10%

(c) $200(1+r)^2 = 237.62$; $r = 9\%$

(d) $150(1+r)^{10} = 300$; $r = 7.177\%$

4. What is the future value of investing \$10,000 for 1 1/2 years at a stated annual interest rate of 12 percent, compounded quarterly?

$FV_{1.5} = \$10,000(1.03)^6 = \$11,940.52$

5. You read in the newspaper that your old high school buddy, Panning Meyton, recently signed a \$44 million contract to play football for the NFL Dolts. The contract is structured as follows: Panning will receive \$11.6 million tomorrow as a signing bonus, \$4 million per year (annual payments, first payment in one year) for the next six years, and an \$8.4 million bonus after three years. How much is the contract actually worth today? Assume an interest rate of 10% per year.

$$PV = \$11,6000,000 + \$4,000,000 \left[\frac{1}{0.10} - \frac{1}{0.10(1.10)^6} \right] + \left[\frac{\$8,400,000}{(1.10)^3} \right] := \$35,332,087$$

Making Mathematics Come to Life Oleg A. Ivanov, 2009-12-16 It is difficult to define the genre of the book It is not a problem book nor a textbook nor a book for reading about mathematics It is most of all reminiscent of a good lecture course from which a thoughtful student comes away with more than was actually spoken about in the lectures from the Preface by A S Merkurjev If you are acquainted with mathematics at least to the extent of a standard high school curriculum and like it enough to want to learn more and if in addition you are prepared to do some serious work then you should start studying this book An understanding of the material of the book requires neither a developed ability to reason abstractly nor skill in using the refined techniques of mathematical analysis In each chapter elementary problems are considered accompanied by theoretical material directly related to them There are over 300 problems in the book most of which are intended to be solved by the reader In those places in the book where it is natural to introduce concepts outside the high school syllabus the corresponding definitions are given with examples And in order to bring out the meaning of such concepts clearly appropriate but not too many theorems are proved concerning them Unfortunately what is sometimes studied at school under the name mathematics resembles real mathematics not any closer than a plucked flower gathering dust in a herbarium or pressed between the pages of a book resembles that same flower in the meadow besprinkled with dewdrops sparkling in the light of the rising sun *Schaum's Outline of Theory and Problems of Programming with Fortran 90* William E. Mayo, Martin Cwiakala, 1995 **Catalog of Copyright Entries. Third Series** Library of Congress.
